## News

### India overtakes Russia to become third worst-hit nation

- India has overtaken Russia with the world's third-highest number of novel coronavirus cases, at nearly 700,000, according to the latest data, as the outbreak shows no sign of slowing.
- New Delhi has opened a new 10,000-bed temporary virus hospital while other cities are tightening restrictions on movement to head off a new surge in cases.
- According to the Indian Council of Medical Research - the country's top medical research body - a total of 9,969,662 samples were tested for the disease until July 5. Around 180,600 people were tested on Sunday.  
<https://www.aljazeera.com/news/2020/07/covid-19-india-overtakes-russia-worst-hit-nation-200706070521099.html>

### Worldwide top 10

1. United States - 2,888,729 cases, 129,947 deaths
2. Brazil - 1,603,055 cases, 64,867 deaths
3. India - 697,413 cases, 19,693 deaths
4. Russia - 686,777 cases, 10,271 deaths
5. Peru - 302,718 cases, 10,589 deaths
6. Chile - 295,532 cases, 6,308 deaths
7. United Kingdom - 286,932 cases, 44,305 deaths
8. Mexico - 256,848 cases, 30,639 deaths
9. Spain - 250,545 cases, 28,385 deaths
10. Italy - 241,611 cases, 34,861 deaths

### COVID-19 and now China's Inner Mongolia region reports bubonic plague case

- While China appears to have reduced coronavirus cases to near zero, other infectious threats remain, with local health authorities announcing a suspected bubonic plague case in the Inner Mongolia Autonomous Region.
- Authorities in the Bayannur district raised the plague warning on Sunday, ordered residents not to hunt wild animals such as marmots and to send for treatment anyone with fever or showing other possible signs of infection.
- Plague can be fatal in up to 90% of people infected if not treated, primarily with several types of antibiotics.
- Russia said on Monday it had stepped up patrols to stop people hunting marmots near its border China and Mongolia after the countries reported possible cases of bubonic plague, which can be carried by the animals.

## Hundreds of scientists claim WHO is downplaying risk of airborne spread of coronavirus

- A group of 239 scientists will publish an open letter this week calling on the World Health Organization to take into account that airborne transmission is a significant factor in how COVID-19 spreads. A group made up of more than 200 scientists say the WHO is being too reluctant to update the official view on transmission that downplays the risk of airborne transmission. If the organization does update its view, the implications would be huge and would require a major adjustment to existing efforts to contain the virus.
- The WHO and the Centers for Disease Control and Prevention continue to claim that when it comes to COVID-19, the general public has to worry about two types of transmission. One involves inhaling droplets from an infected person who is close by and the other involves touching a surface that is contaminated with the virus and then touching your eyes, nose or mouth. Now this group of scientists from 32 countries say the WHO needs to recognize that the virus lingers in the air in closed spaces and can also infect people that way. Although the scientists acknowledge that the coronavirus isn't measles that can easily transmit through the air, the risk is real, particularly in poorly ventilated rooms and confined spaces like public transportation.

## FDA authorizes coronavirus antigen test that can yield results in 15 minutes

- The US Food and Drug Administration granted emergency use authorization on Monday for an on-site coronavirus antigen test that can yield results in 15 minutes.
- Here's how the test works: The diagnostic test uses a device made by medical technology company Becton, Dickinson and Company that is a little larger than a cell phone to analyze samples, it said.
- It detects bits of the coronavirus called antigens. It's not a home test, but can be used by medical professionals in pharmacies, urgent care centers and doctors' offices.
- The test itself uses a standard nose and throat swab to collect samples, which are put into a small cassette for use in the device for analysis.
- Because antigen tests are relatively quick and easy, they have been eyed as a potentially valuable screening tool to quickly test large amounts of people for the virus.

**Avoid the Three C's**  
Be aware of different levels of risk in different settings.

There are certain places where COVID-19 spreads more easily:

- 1 Crowded places**  
with many people nearby
- 2 Close-contact settings**  
Especially where people have close-range conversations
- 3 Confined and enclosed spaces**  
with poor ventilation

The risk is higher in places where these factors overlap.  
Even as restrictions are lifted, consider where you are going and #StaySafe by avoiding the Three C's.

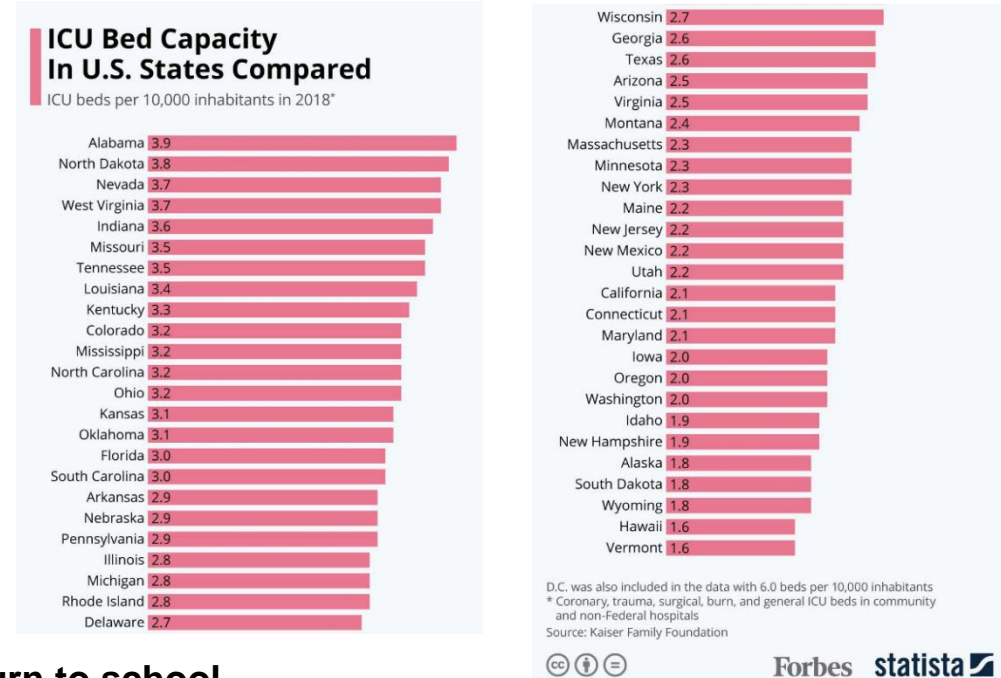

**WHAT SHOULD YOU DO?**

- Avoid crowded places and limit time in enclosed spaces
- Maintain at least 1m distance from others
- When possible, open windows and doors for ventilation
- Keep hands clean and cover coughs and sneezes
- Always wear a mask when you go outside your home

If you are unwell, stay home unless to seek urgent medical care.

## CDC preparing to release new guidance on safe return to school

- The US Centers for Disease Control and Prevention is planning to release new guidance on how K-12 students can physically return to the classroom this year, according to a senior CDC official with knowledge of the discussions.
- The recommendation was presented internally to leaders at the CDC early last week and is “a priority this week,” according to the senior official. Over the weekend, senior officials at the agency presented CDC Director Dr. Robert Redfield with details on the science behind why schools should reopen, the source said. The specifics of the guidance were not available.
- "Schools should be the first to open and the last to close," the official said. "Kids need to physically be in school."
- The officials comments' echo that of the American Academy of Pediatrics, which put out new guidance last week that "...strongly advocates that all policy considerations for the coming school year should start with a goal of having students physically present in school." CNN has reached out to the CDC and the White House coronavirus task force for comment. The exact timetable for the proposed new guidance is unclear.

## 35 NHL players test positive for Covid-19

- The National Hockey League has revealed that the league has administered close to 3,000 Covid-19 tests ahead of the NHL's planned restart to the current season.
- In a statement released Monday, the NHL states that the league has conducted more than 1,400 Covid-19 tests in the past week with 23 of 396 players testing positive for coronavirus.
- The league says an additional 12 players were found to have tested positive for Covid-19 outside of the current optional phase two activities.

- The NHL has yet to announce a start date for the season restart – a 24-team competition to crown the 2020 Stanley Cup champion.

## **Less than 10% of ICU beds available in Arizona, 152 medical personnel sent in to help**

- A new record broken on Friday as less than 10% of licensed ICU beds are available across Arizona. New data from the Arizona Department of Health Services shows that there are 156 licensed ICU beds in the state, but experts warn that does not necessarily mean staffed beds.

<https://www.abc15.com/news/coronavirus/less-than-10-of-icu-beds-available-in-arizona-152-medical-personnel-sent-in-to-help>

## **Calif. sends 'strike teams' to enforce COVID rules at businesses as worker complaints rise**

- About 200 state inspectors fanned out across California over the July 4 holiday weekend to enforce health orders related to coronavirus, including about 100 from the Alcohol Beverage Control agency and the rest from the Division of Occupational Safety and Health and other state licensing entities.
- They are part of new "strike teams" from 10 state agencies that Gov. Gavin Newsom on Wednesday said would focus on counties with the most restrictions, including Riverside and San Bernardino
- The teams made 142 "contacts" with businesses on Thursday, their first day of operation, the state Office of Emergency Services said. They issued seven citations: two in Kern County, three in Los Angeles County and two in Santa Clara County.

## **Riverside County poised to cross 20,000-case threshold Monday**

- Riverside County, home to 2.5 million people, is the fourth most populous county in California, but second in cases behind only Los Angeles County. It has the 19th highest case tally in the nation, according to data posted Saturday on the Johns Hopkins University dashboard
- Officials reported that [94.5% of intensive care unit beds in the county were in use](#) as of Thursday, the last time they updated hospital utilization data. Nearly 73% of hospital beds across the county were in use, representing the highest utilization level in the previous two weeks.

Period July 6- July 13 (24-hr)	Orange	SW San Bernardino	All Deserts	Western Riverside	San Diego
Today	None	Warm	Hot	Warm	None
Tuesday	None	None	Breezy	None	None
Wednesday	None	None	None	None	None
Thursday	None	None	None	None	None
Friday	None	Warm	Hot	Warm	None
Saturday	None	Warm	Hot	Warm	None
Sunday	None	Very Warm	Hot	Very Warm	None
Monday	None	Warm	Hot	Warm	None

**Forecast Discussion**

Another warm day is on tap for today, with similar conditions to yesterday. The hottest temperatures expected will be for the Inland Empire (low 100's) and Lower Deserts (near 115 degrees). The region will cool to near normal Tuesday through Thursday. Another round of warmer weather is likely by Friday into at least the weekend, where temperatures will rebound yet again to higher than normal values.

Latest hazard threat table: <https://www.wrh.noaa.gov/sgx/event/dsstable.php>
