Israel announces antibody that neutralizes coronavirus, even amongst infected.

- Israel announces an antibody that neutralizes coronavirus, even amongst the infected.
- The Israel Institute for Biological Research (IIBR) and the Israeli Ministry of Defense announced that the development phase of an antibody that would be effective in neutralizing SARS-Cov-2, known as the coronavirus, has been completed.
- Through its Twitter account, the Israeli Ministry of Defense confirmed the development of what could become the first antidote to covid-19.
- Israel claim that the IIBR is the first institution to achieve a scientific breakthrough that meets all three parameters:
 1. A new and refined monoclonal antibody containing a deficient proportion of harmful proteins
 2. The antibody can neutralize the coronavirus
 3. The antibody was explicitly tested in aggressive cases of coronavirus
- In the meantime, the Government of Israel announced the complete removal of mobility restrictions imposed on citizens.
https://www.theyucatantimes.com/2020/05/israel-announces-antibody-that-neutralizes-coronavirus-even-amongst-infected/?fbclid=IwAR2jT_nWMAh1HXpF9U8An083Ot1H0KUWAwnq5kbbqjS2taBf3rXtTZ340

Doctor's Note: How COVID-19 is increasing antibiotic resistance

- Doctors and scientists have long spoken about the world sleepwalking towards an "antimicrobial apocalypse" - where antibiotics used to treat some of our most common and serious infections are rendered useless as bacteria grow resistant to them. These experts have said urgent action is needed if we want to continue to be able to treat bacterial infections effectively in the future.
- Antibiotics are one of our most useful medications. There are many different types and they work in a variety of ways, but essentially they all have the same goal: to stop bacteria that cause infections from multiplying and spreading. They are used to treat simple chest and throat infections but also in hospitals to treat more serious infections such as meningitis and sepsis.
- Without antibiotics, infections can run rife inside the human body causing widespread damage and even death. Without them, the infections we normally treat quite effectively will begin to increase and we will be left with no medicine with which to fight them.

Atlanta Mayor Tests Positive For COVID 19

- Atlanta Mayor Keisha Lance-Bottoms shared Monday afternoon on Twitter that she tested positive for COVID-19.
- "COVID-19 has literally hit home. I have had NO symptoms and have tested positive," she wrote on Twitter.
<https://patch.com/georgia/atlanta/atlanta-mayor-tests-positive-covid-19>

Pooling Coronavirus Tests Can Spare Scarce Supplies, But There's A Catch

- The technique, called pooled testing, won't resolve the testing bottlenecks in the United States. But it could help.
- The idea is simple. Instead of running a coronavirus test on every specimen that arrives in a lab, take a sample of that specimen and combine it with samples from other specimens. Then run a single test on that pooled sample.
- If it comes back negative, you can assume that all of the original samples are negative. A single test has done the work of five or 10, compared with testing the samples individually.
- If the pooled test comes back positive, it's then necessary to test each of the original specimens individually — and that takes more time and more material. But on the whole, if a lab is testing samples that will be negative at least 90% of the time, the lab comes out ahead using the pooled approach.

US is still 'knee-deep' in the first wave of the coronavirus pandemic, Fauci says

- In the span of a week and a half, the number of coronavirus cases in the United States has doubled, yet officials are saying this is still the first wave of the pandemic.
- "We are still knee-deep in the first wave of this," Dr. Anthony Fauci, director of the National Institute of Allergy and Infectious Diseases, said in a Facebook and Twitter livestream Monday. "I would say, this would not be considered a wave. It was a surge, or a resurgence of infections superimposed upon a baseline ... that really never got down to where we wanted to go."
- Dr. Fauci on Monday, Dr. Francis Collins, the National Institutes of Health director, tried to reassure Americans the country would get through the pandemic.
- "We just need all of the people in America to have that confidence. Keep your optimism, keep your hope and do the right thing," Collins said, adding that people need to continue sticking with the recommendations of wearing masks, social distancing, frequent hand washing and avoiding cramped spaces indoors.
- "All of those simple and straightforward things that I know you're a tired of. But the virus is still out there and needs all of us to keep this from getting any worse," Collins said.

San Antonio, Bexar County reports youngest COVID-19 related death so far

- San Antonio and Bexar County reported its youngest COVID-19-related death so far on Sunday. The patient was 19 years old or younger, according to the city's website.
- The Miracle League of San Antonio posted on Facebook Sunday that 17-year-old Isaac Flores, the son of Coach Frank Flores, passed away due to complications with the coronavirus.

<https://www.ksat.com/news/local/2020/07/06/covid-19-related-deaths-continue-to-increase-in-san-antonio-bexar-county/>

Florida teen COVID-19 victim received unproven treatment at home before dying at hospital, report says

- The family of a 17-year-old Lee County girl who died last month from COVID-19 treated her symptoms at home for nearly a week before taking her to a hospital, a medical examiner's report concludes.
- The home care included giving the girl unproven drugs and putting her on an oxygen tank used by her grandfather.

<https://www.news-press.com/story/news/2020/07/06/fort-myers-teen-who-died-covid-19-coronavirus-first-got-hydroxychloroquine-treatment-home/5383971002/>

More than 300 children in Texas day cares have caught COVID-19

- Although COVID-19 transmission rates nationwide among children have appeared to remain relatively low, more than 300 children at Texas childcare centers have tested positive, and the numbers are rising quickly.
- As of Tuesday, there were 950 reported positive cases of COVID-19 - 307 children and 643 staff members - at 668 child care locations. Statewide, 12,207 licensed childcare operations are open, and total reported coronavirus cases have risen from 59 cases in mid-May and 576 on June 23.
- On Thursday, Texas published a new set of emergency rules for childcare centers, reinstating safety mandates that had been repealed in mid-June. These include requiring childcare centers to check temperatures of staff and students daily, having parents drop students off outside, and not serving family-style meals.

SHELTER IN PLACE ORDERS
 Hover over bar for dates and details (Select a state from dropdown to show orders)

Data Sources: Case data are courtesy of USAFacts.org. Refer to USAFacts for methods of data collection and processing. Officially verified U.S. case data are available on CDC's U.S. Cases page. The mobility metrics are generated utilizing Google Mobility Reports (<https://www.google.com/covid19/mobility/>), Safegraph Social Distancing Metrics (<https://docs.safegraph.com/docs/social-distancing-metrics>), and Cuebiq Mobility Insights (<https://www.cuebiq.com/visitation-insights-covid19/>). The shelter in place orders are collected and compiled by CDC's COVID-19 response.

Limitations: The Google Mobility Reports data are not updated as frequently as other sources and often has a lag between updates. The Safegraph Social Distancing Metrics may undercount the number of at home devices due to the fact that GPS does not register as often for people who are stationary. Also, GPS does not consistently update throughout the day, therefore someone may have taken a short trip (or not taken the device) and returned home before a sample was taken. In this case they would be counted as at-home. The shelter in place order data do not contain other types of government orders.

Emergency Management Department - COVID-19 Metrics

Last Updated:

2020-07-06 14:00:00

PREPARE

RESPOND

RECOVER

This collection of metrics is intended to help illustrate the impact of COVID-19 on the hospitals in Riverside County. The Emergency Management Department (EMD), in partnership with the Public Health Department, collects and tracks multiple metrics to assist in the County's response to COVID-19.

For the most up-to-date Riverside County Coronavirus information, please visit the Riverside County Public Health Department's website: <https://www.rivcoph.org/coronavirus>

Reporting of data runs 24 hours behind for State datasets, therefore the metrics below will normally be current with yesterday's data.

Hospitalized COVID-Confirmed Patients 495 ↑ 2.7% from previous day	Riverside Co. Hospitals' Patient Census 2,423 ↑ 2.0% from previous day	Ventilators In Use 202 ↓ -5.2% from previous day	Available Ventilators at Hospitals 488 ↑ 2.5% from previous day	ICU Beds In Use 362 ↓ -0.3% from previous day
---	---	---	--	--

Licensed Hospital Bed/ICU Bed Utilization Trends

This page was created by the Riverside County Emergency Operations Center (EOC) to visualize hospital bed utilization rates compared with ICU bed utilization for the past two weeks. Hospitalized COVID-Confirmed Patient volume is received with a day's lag time.

Wednesday	None	None	Breezy	None	None
Thursday	None	None	Warmer	None	None
Friday	None	Warm	Hot	Warm	None
Saturday	None	Very Warm	Very Hot	Very Warm	None
Sunday	None	Very Warm	Very Hot	Very Warm	None
Monday	None	Warm	Very Hot	Warm	None
Tuesday	None	Warm	Hot	Warm	None

Forecast Discussion

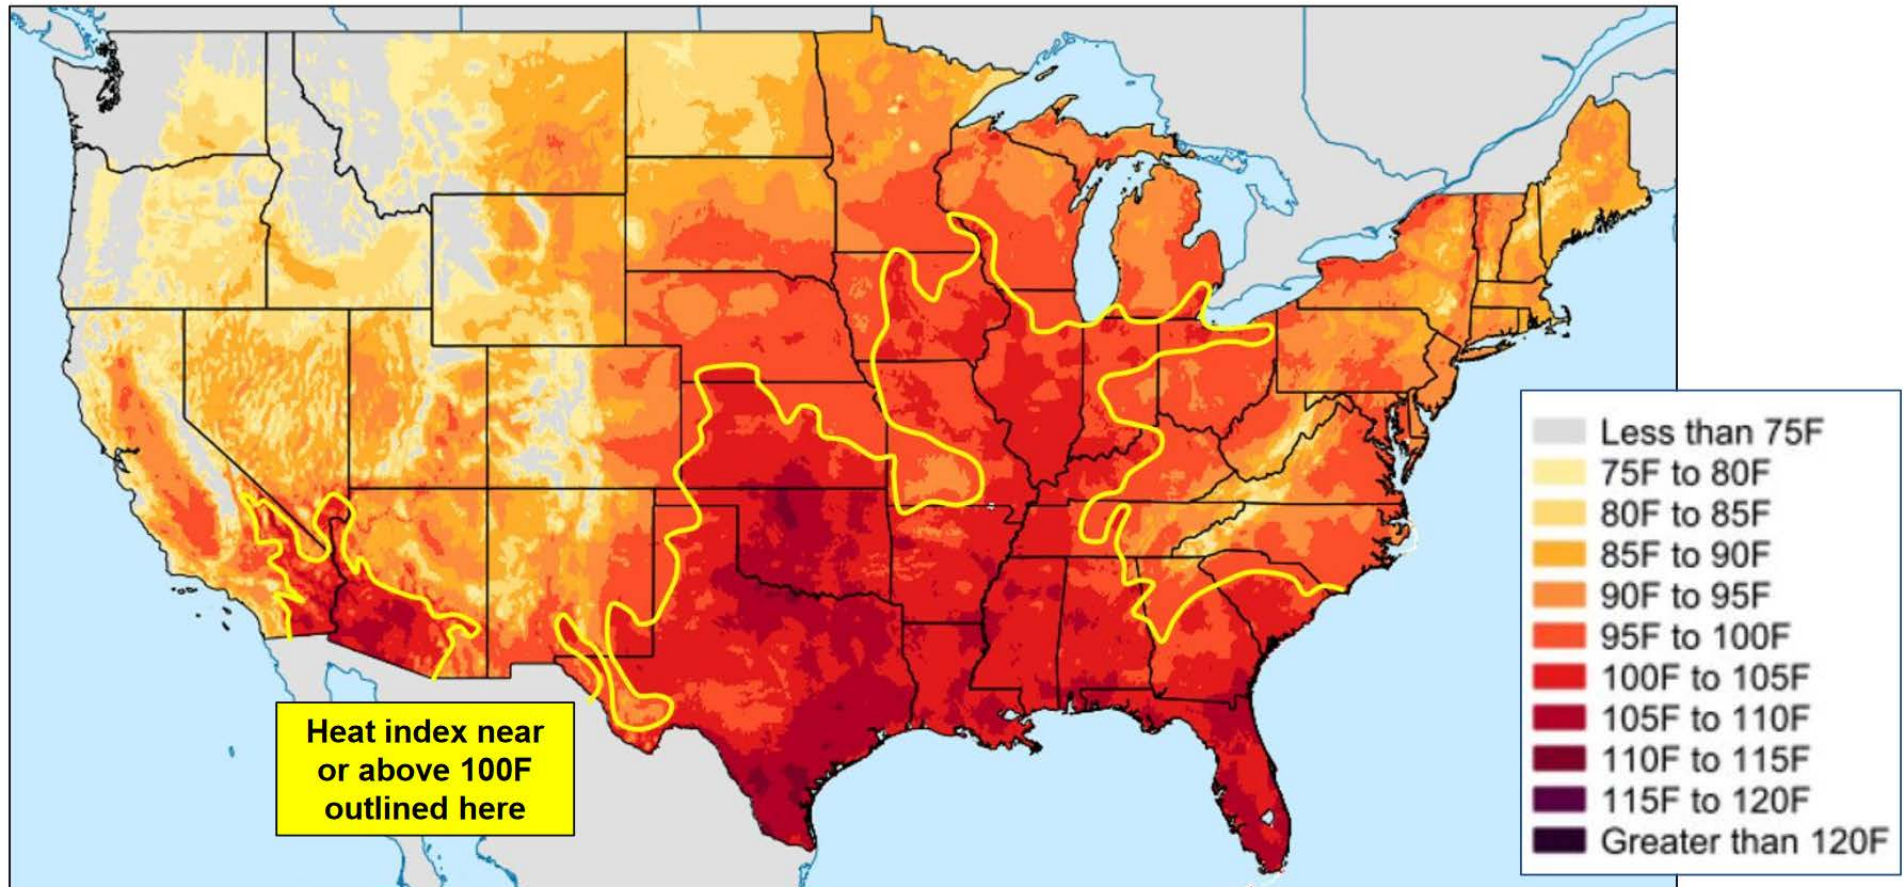

Cooler weather is in store through Thursday for all areas. A significant warm-up is in store Friday through at least Monday, with temperatures well above normal for all areas. The hottest locations will be the deserts. Temperatures in the lower deserts will be 115-120 degrees, and the high desert will be 105-110 degrees Saturday through Monday. Temperatures in the Inland Empire will be 100-105 degrees, and inland Orange County will be 95-100 degrees. While the heat may relent slightly towards the middle of next week, an extended period of hot weather appears likely through much of next week.

Latest hazard threat table: <https://www.wrh.noaa.gov/sgx/event/dsstable.php>

Maximum Heat Index Thru Friday

FEMA

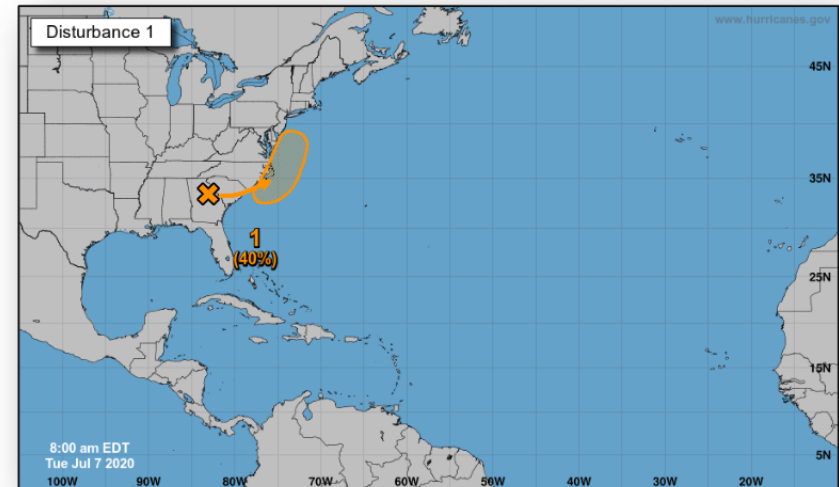

Tropical Outlook – Atlantic

Disturbance 1 *(as of 8:00 a.m. ET)*

- Located inland over northeastern Georgia
- Expected to move NE toward the coast of the Carolinas and the Mid-Atlantic states
- Some development is possible later this week if it moves over water
- Regardless of development, it is forecast to produce locally heavy rainfall that could cause flash flooding across portions of the southeastern U.S. during the next couple of days
- Formation chance through 48 hours: Low (20%)
- Formation chance through 5 days: Medium (40%)

Tropical Outlook – Eastern Pacific

Tropical Storm Cristina (Advisory #3 as of 5:00 a.m. ET)

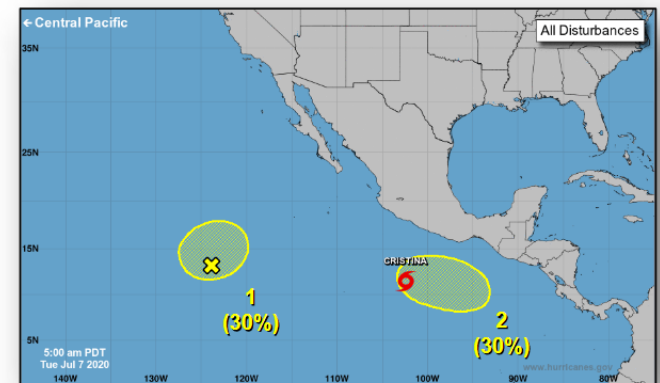

- 535 miles SSE of Manzanillo, Mexico
- Moving WNW at 13 mph; this motion expected to continue during the next few days, keeping it well away from the coast of Mexico
- Maximum sustained winds 40 mph; forecast to become a hurricane on Wednesday
- Tropical storm force winds extend 35 miles
- No costal watches or warnings in effect

Disturbance 1 (as of 8:00 a.m. ET)

- 1,000 miles SW of the southern tip of Baja California peninsula
- Some slow development possible over the next few days
- Formation chance through 48 hours: Low (20%)
- Formation chance through 5 days: Low (30%)

Disturbance 2 (as of 8:00 a.m. ET)

- Forecast to form south of the Gulf of Tehuantepec late this week
- Gradual development is possible this weekend
- Formation chance through 48 hours: Low (near 0%)
- Formation chance through 5 days: Low (30%)

Tropical Outlook – Central Pacific

Disturbance 1 *(as of 8:00 a.m. ET)*

- Located far SE of the Big Island of Hawaii
- Some development is possible later in the week as it moves W
- Formation chance through 48 hours: Low (near 0%)
- Formation chance through 5 days: Low (10%)
