News

Is Turkmenistan really coronavirus-free?

- Turkmenistan is one of a handful of countries that has not reported a single coronavirus case during the global pandemic. Despite neighbouring Central Asian countries including Iran, Kazakhstan, Uzbekistan and Afghanistan all battling COVID-19, Turkmenistan has so far only acknowledged the presence of pneumonia. Some critics are doubtful of the government's coronavirus-free claim and say its continued denial is risking the health of Turkmen citizens. Human rights advocates outside of Turkmenistan allege that medical workers have been silenced when it comes to the pandemic.
- The country, which has in the past been criticized for its extreme lack of transparency, has been taking precautions for disease prevention. The government temporarily stopped train services, shut down malls and restaurants, established a COVID-19 information hotline, and is asking the public to wear masks.
- In mid-July, a health advisory team from the World Health Organization was allowed to visit Turkmenistan. They did not question the government's health data, but instead provided recommendations to enforce public health measures "as if COVID-19 was circulating" there.

One of the world's 'most livable' cities just went into full lockdown mode as coronavirus cases spike

- Australia's second biggest city faces strict lockdown measures as the state of Victoria saw another record spike in coronavirus cases — 671 in a single day.
- How strict? Starting Sunday evening, a curfew between 8 p.m. and 5 a.m. will be enforced, with the premier of Victoria ordering the region into a "state of disaster." According to Premier Daniel Andrews
- "We have to do more," he pleaded, "and we have to do more right now," telling people that, "Where you slept last night is where you'll need to stay for the next six weeks."
- Furthermore, only one person per household in Melbourne, which spent most of July under these restrictions, will be allowed to leave their homes once a day outside the curfew restrictions. And that's only to pick up essential goods within a five-kilometer radius of their home.

Russia gears up for mass vaccination against coronavirus despite international skepticism

- Health Minister Mikhail Murashko said clinical trials of a coronavirus vaccine candidate from the Moscow-based Gamaleya Institute were complete, Russian state news agency RIA reported Saturday. Moscow has claimed the test results showed an immune response in all subjects, with no side effects or complications.
- Russia has completed early-stage clinical tests with the vaccine candidate from the Gamaleya Institute, a spokesman for Russia's RDIF sovereign wealth fund told CNBC on Monday. The country is now set to begin large-scale phase three trials this month. This phase of clinical research is the only way to show whether a vaccine is effective.
- According to the World Health Organization, there are 26 candidate vaccines in clinical trials around the world, including an early-stage one from the Gamaleya Institute. But the WHO has not listed any second or third-phase trials from the country.

Britain to roll out millions of 90-minute coronavirus tests

- Millions of COVID-19 tests able to detect the virus within 90 minutes will be rolled out to British hospitals, care homes and laboratories to boost capacity in the coming months, the country's health minister said on Monday.
- They will comprise 5.8 million tests using DNA and 450,000 swab tests. Neither will need to be administered by a health professional, said Matt Hancock.
- "The fact these tests can detect flu as well as COVID-19 will be hugely beneficial as we head into winter, so patients can follow the right advice to protect themselves and others," he said.
- Separately, the publicly-funded National Health Service said it would be offering "COVID-friendly" treatments to cancer patients, including drugs that do not have a big impact on the immune system.
- Britain's healthcare system has come under severe strain during peaks in the country's COVID-19 outbreak, which has killed more than 46,000 people, the fourth highest toll in the world, according to a Reuters tally collated on Sunday.

White House considering unilateral actions with coronavirus aid bill stuck in Congress: sources

- The Trump administration is considering taking "a number of options" without congressional approval as negotiations on the fourth coronavirus stimulus relief package are stalled between the White House and lawmakers on Capitol Hill, Fox News has learned.
- A senior administration official told Fox News Monday that the administration is weighing taking unilateral action to quell the economic repercussions of the COVID-19 pandemic.
- "As the negotiations continue to progress as a snail's pace, the administration is considering a number of options that might be available without congressional legislative action,".
- At this point, it is unclear what item the administration could attempt unilateral action on, but much of the negotiations on Capitol Hill have come to a stalemate with regards to unemployment benefits.
- "Those that are counting on enhanced unemployment need to be gravely concerned about the lack of progress," White House chief of staff Mark Meadows told Fox News. "My recommendation would be for them to call their members of Congress and their senators and ask them why they are not willing to compromise when obviously the White House is willing to compromise."

As temperatures rise with coronavirus cases, experts eye impact of air conditioning

- As the summer heat and new cases of the novel coronavirus continue to surge in much of the country, scientists are warily watching what potential impact retreating into air conditioned spaces may be having on the further spread of the virus.
- Under normal circumstances, health care professionals encourage the public to seek refuge from high temperatures in the comfort of an air-conditioned space. But these are hardly normal circumstances.

- While individuals can take steps to protect themselves, a growing body of research suggests that indoor spaces with poor ventilation or lack of new air can raise the risk of the virus' spread, according to infectious disease aerobiologist Dr. Donald Milton of the University of Maryland.
- "Anytime we are going into a closed environment, we are at higher risk," Milton told ABC News. He added that he was most concerned about people "going to a cooling center where ... the air conditioning is not filtering air or bringing in outside air -- and a lot of people are close together."
- New York State, for example, recently issued guidelines requiring large shopping malls to install MERV-13 rated filters before they re-open, which is the filter strength Bromage has endorsed.
- "A lot of common sense things like increasing fresh air, not having a lot of people in an enclosed space, wearing masks," he said. "That all makes a difference."

## Californians renting out their backyard pools amid coronavirus closures

- With a heatwave scorching Southern California and many pools still closed to curb the spread of the coronavirus, homeowners are renting out their backyard pools on an hourly basis for some extra cash.
- One Los Angeles couple, Cooky and Alain Bali, said they've made about $7,000 by opening their pool to strangers.
- The couple used Swimply, a small start-up that lets people offer their backyard pool for rent by the hour for a 15% service fee.
- The website had 165 pools listed in the L.A. area Sunday, with prices ranging from $30 to $75 per hour.
- Some pools are touted for being "kid-friendly," others as "resort-like," and some listings say surfaces are disinfected between visits.
- Fearing crowding at beaches and with many indoor settings such as theaters closed, homeowners say the private pools offer a safe way to cool off in the summer.

Tropical Storm Isaias

Flood Hazard Outlook

FEMA — U.S. DEPARTMENT OF HOMELAND SECURITY

Flood Hazard Messages
(associated with Tropical Storm Isaias)

• Tropical Storm Isaias is forecast to bring heavy rainfall to Florida and the immediate Georgia coast tonight, and parts of the Carolinas, Mid-Atlantic, and Northeast this week.

• In Florida and across the immediate Georgia coast, flash and urban flooding, especially in low-lying and poorly drained areas, will be the primary threat through tomorrow.

• Across the western Carolinas and Virginia, isolated flash and urban flooding, rapid rises on small streams, and isolated minor flooding will be possible as early as tonight associated with heavy rainfall ahead of Isaias. Quick-responding rivers in the southern Appalachians will be susceptible to minor river flooding, especially where streamflow conditions are already running above to much above normal.

• Across the eastern Carolinas and Virginia, heavy rainfall will result in flash and urban flooding, rapid rises on small streams, and widespread minor and isolated moderate river flooding by Monday night.

• In the Mid-Atlantic into the Northeast, isolated flash and urban flooding, and rapid rises on small streams will be possible associated with heavy rainfall over the next few days. Quick-responding streams and rivers in these regions will be susceptible to minor flooding. Moderate flooding is also possible in the Mid-Atlantic.

• Interests along the East Coast should monitor the progress of Tropical Storm Isaias and ensure they have their flood plan in place.
