NIH-funded project seeks to identify children at risk for MIS-C

- The National Institutes of Health has announced research funding to encourage the development of approaches that identify children at high risk for developing Multisystem Inflammatory Syndrome in Children (MIS-C), thought to be a severe complication of COVID-19. Up to \$20 million will be awarded to successful research proposals over four years.
- Most children exposed to or infected with SARS-CoV-2, the virus that causes COVID-19, develop only a mild form of the illness. However, others go on to develop MIS-C([link is external](#)), a severe, sometimes fatal, inflammation of organs and tissues, including the heart, lungs, kidneys, brain, skin and eyes. The new effort seeks to encourage studies of genetic, immune, viral, environmental, and other factors that influence how severe a case of COVID-19 will be and the chances of developing to MIS-C.
- "We urgently need methods to distinguish children at high risk for MIS-C from those unlikely to experience major ill effects from the virus, so that we can develop early interventions to improve their outcomes," said Diana W. Bianchi, M.D., director of NIH's Eunice Kennedy Shriver National Institute of Child Health and Human Development (NICHD).

COVID-19 treatment based off compound in our body could stop virus from replicating

- A treatment that could help slow the replication of COVID-19 in infected people is in clinical trials, and it's being used on patients in Houston.
- According to the CEO of NeuroRx, the treatment is based off of a compound that is already in our body. "This compound is the reason that human beings can inhale smoke and the lung can repair itself," said Dr. Jonathan Javitt, the CEO of NeuroRX Incorporated.
- The treatment has not been officially named and for now is called RLF-100.
- The treatment blocks the cells that create inflammation and stops the replication of the virus. It also causes cells in the lung to create a fluid that coats the inside of the lung so that oxygen can enter the blood.
- Furthermore, Dr. Javitt said a group of very ill patients are receiving the treatment at Houston Methodist Hospital. Javitt says the patients have respiratory failure combined with other serious health problems. He said six of the patients in the compassionate care program had chest X-rays cleared within days of receiving the treatment. He also said inflammation decreased and blood oxygen improved.
- "Dr. George Youssef and his colleagues have shown already six patients, but they have more than 25 in this compassionate care program where chest X-rays have cleared within days of treatment, and that's just not commonly seen with COVID," said Javitt.
- NeuroRx learned on Thursday that the FDA has invited them to do a trial for the inhaled version of the treatment. It would be for patients who are not nearly as sick.

Fauci 'satisfied' with enrollment for the first week of Covid-19 vaccine trial

- CNN has obtained part of a Friday, July 31 email from Moderna, the company running the trial, that states 1,290 people were randomly assigned to get either the vaccine or a dummy shot as of that date. The trial began on Monday, July 27.

- The email was sent to sites across the US that are participating in the Moderna trial. Moderna plans to enroll 30,000 people at its 89 sites.
- "We hope within a period of a few months, a couple of months, that we'll be able to enroll hopefully by the end of the summer so that we can start getting some results," Fauci, director of the National Institute of Allergy and Infectious Diseases, said July 27 when he announced the start of the Phase 3 trial
- Fauci told CNN that he expects to get an answer about whether the vaccine works in November or December. "Maybe we'll get an answer as early as October, but I doubt it," he said.

lack of diversity threatens to undermine vaccine trials, experts warn

- The remarkably fast progress of two leading contenders for an effective coronavirus vaccine has raised hopes the pandemic may be speedily tamed. But some experts have warned the vaccine trials risk being undermined by a lack of diversity among their participants.
- Last month, the University of Oxford reported a vaccine it is developing with AstraZeneca from a chimpanzee virus elicited a “strong immune response” in people involved in an initial trial. A separate vaccine project, overseen by the US biotech company Moderna, also saw encouraging results from an early small-scale trial.
- The two research trials, striving to charge ahead of a pack of more than 140 different teams racing to find a vaccine to tackle the coronavirus pandemic, have sparked a rare burst of optimism during the crisis. But the trials are striking not only for their rapid pace but also their overwhelming whiteness.
- In the Oxford trial of more than 1,000 healthy adults, 91% were white, with about 5% Asian and less than 1% black. The smaller Moderna trial saw 45 adult participants, 40 of them white and just two black volunteers.
- Research has shown that people from different racial backgrounds can respond differently to drugs and therapies. Other factors such as age – people’s immune response lessens as they get older – are also important.

Pfizer agrees to manufacture Gilead’s coronavirus drug remdesivir

- Pfizer has agreed to manufacture and supply Gilead Sciences’ antiviral drug remdesivir.
- The multiyear agreement will support efforts to scale up the supply of the intravenous drug. Pfizer will manufacture the drug at its McPherson, Kansas, facility.
- “From the beginning it was clear that no one company or innovation would be able to bring an end to the COVID-19 crisis. Pfizer’s agreement with Gilead is an excellent example of members of the innovation ecosystem working together to deliver medical solutions,” Pfizer CEO Albert Bourla said in a statement. “Together, we are more powerful than alone.”
- There are no FDA-approved drugs for the coronavirus. But doctors have been using remdesivir on Covid-19 patients in recent months. In May, the Food and Drug Administration granted remdesivir an emergency use authorization, allowing hospitals and doctors to use the drug on hospitalized Covid-19 patients even though the medication has not been formally approved by the agency.

Coronavirus relief talks grind to a near halt, dimming chances of a stimulus deal

- Democrats and the Trump administration remain far apart on coronavirus aid following a three-hour meeting Thursday.
- Nancy Pelosi, Chuck Schumer, Steven Mnuchin and Mark Meadows will meet again Friday afternoon.
- Mnuchin and Meadows said President Donald Trump is considering executive action to address unemployment insurance, evictions, student loans and a payroll tax cut if the sides cannot make significant progress Friday.
- The parties face pressure to strike an aid agreement after both enhanced jobless benefits and a moratorium on evictions from federally backed housing expired

Coronavirus Soars In Young People; Risky Behavior Partly To Blame

- Early in the coronavirus crisis, older Americans were warned they were more at risk of contracting COVID-19, the disease caused by the coronavirus. However, a new model from the World Health Organization shows cases soaring among young people, caused in part by their risky behaviors, experts say.
- As the number of U.S. coronavirus cases approaches 5 million, cases are skyrocketing among children, teens and young adults. The proportion of cases in teens and young adults has gone up six-fold, and in very young children and babies the proportion has increased seven-fold, the WHO told CNN chief medical correspondent Dr. Sanjay Gupta.
- The increase could be explained by broader testing, greater detection of milder cases and shifting demographics of hot spots, but "a rise in risky behavior after easing of public health and social measures" is also to blame.
- In Georgia, a 7-year-old Black boy from Chatham County recently died from COVID-19, the youngest victim of the virus in the state, according to data compiled by the state health department. The boy is among 4,000 Georgians killed by the coronavirus.
- As of Friday morning, the U.S. COVID-19 death toll had surpassed 160,000 people, according to a tally by Johns Hopkins University

U.S. adds 1.76 million jobs in July as hiring slows after fresh coronavirus outbreak

- Unemployment falls for third straight month to 10.2% from 11.1%
- The smaller increase in job creation took place against the backdrop of surge in coronavirus cases in a number of states, including California, Texas and Florida. Some restrictions on businesses were reimposed and Americans showed more caution in where they went and what they did.
- The U.S. economy added 1.8 million new jobs in July, reflecting a sharp slowdown in hiring after a resurgence in coronavirus cases halted the return of many workers to their jobs. Getty Images
- The mild improvement in hiring was a bit weaker than it appeared. The government's process of seasonal adjustments showed an exaggerated increase in school employment. Stripping out government employment, private-sector jobs rose by 1.46 million last month.
- The slowdown in hiring — hardly unexpected — will make it harder for the economy to recover quickly.

- The U.S. shed more than 22 million jobs during the height of the pandemic. So far it's only restored about 9.3 million, leaving more than half of the Americans who lost their jobs without work.

Arizonans Among Dead From Ingesting Hand Sanitizer

- Fifteen people were found to have methanol poisoning after ingesting hand sanitizer in two states, including Arizona, the Centers for Disease Control said Thursday. Of those 15 cases, four patients died and others were discharged from the hospital with permanent side effects.
- The CDC reported 15 cases of methanol poisoning in Arizona and New Mexico between May 1 and June 30. In addition to the four who have died, three now are now visually impaired. All cases were related to ingesting alcohol-based sanitizers infused with methanol, many of which the Food and Drug Administration has recalled.
- Methanol can be toxic when absorbed into the skin and ingesting it is even more dangerous.
- "Alcohol-based hand sanitizer products should never be ingested," the CDC wrote in its report, noting that many adults view it as an alcohol substitute. The CDC recommends its use to clean hands if soap and water are not immediately available
- The CDC worked with the Arizona Department of Health Services and Arizona Poison and Drug Information Center System to review records and data. The latter group told Patch that 11 cases were positively identified in Arizona after having patients' methanol levels drawn, though not all hospitals drew those levels. Of those 11 patients, five died and one is now permanently blind, said Dr. Steven Dudley, director of the Arizona Poison and Drug Information Center.

OC Looks To Hospitals For Trustworthy Data As 44 More Die

- The Orange County Health Care Agency has reported 44 COVID-19 fatalities in the past two days, raising the coronavirus death toll to 697.
- The number of patients being treated for COVID-19 and related illness in county hospitals dropped from 539 Tuesday to 536 Wednesday and 517 on Thursday. The while the number of patients in intensive care inched up from 167 Tuesday to 172 Wednesday and 171 Thursday, according to the agency.
- Though OC Health Care reported 65 new diagnoses of coronavirus Wednesday, a low total for the day, and likely a "false number," according to Orange County's CEO Frank Kim. A large "glitch" California has experienced in reporting positive tests from laboratories.
- "There's no way our numbers would drop that fast," Kim said. "Out of 5,000 new tests, that's incredibly low."
- On Thursday, the county reported 580 more cases, and an additional 3,330 tests reported for the day.

Pandemic Snafu: State Mistakenly Drops Medi-Cal Coverage For Some Low-Income Californians

- An error involving the state's automated system for Medi-Cal renewals triggered at least some of the drops in coverage, despite Gov. Gavin Newsom's orders that recipients remain on the rolls during the coronavirus crisis.

- As the coronavirus continues to sicken Californians, the state mistakenly terminated or reduced health insurance benefits for thousands of low-income people.
- A spokesperson for the California Department of Health Care Services, which oversees the Medi-Cal program, the state's version of Medicaid, said on Tuesday it is still assessing how many people may have been affected, but so far it has sent notices to 200,000.
- Medi-Cal provides health insurance to about 12.5 million low-income Californians.
<https://patch.com/california/across-ca/pandemic-snafu-state-mistakenly-drops-medi-cal-coverage-some-low-income>

School Reformers Win Major Skirmish

- California's education department has ruled that Los Angeles Unified School District's plan for educating at-risk kids is deficient – a warning to other school systems.
- The huge Los Angeles Unified School District is ground zero in California's perpetual political war over educating millions of children on the short end of the state's chronic "achievement gap."
- LA Unified, the nation's second largest school system, has nearly 10% of the state's 6 million public school students, the vast majority of whom are considered to be "at risk" due to poverty, lack of English language skills or foster child status.
- Each year, California taxpayers give LA Unified more than \$1 billion in extra financial aid to help those kids increase their academic achievement under the Local Control Funding Formula (LCFF)
- At the heart of LCFF is the requirement that (the) district be fully transparent about how they are spending their money so that community stakeholders can provide input into decisions and hold districts accountable for using funding equitably and effectively
- The decision's newly required transparency empowers parents and outside monitors, such as Public Advocates, in their efforts to compel local school systems to be more specific on how they spend tens of billions of dollars each year.
<https://patch.com/california/across-ca/school-reformers-win-major-skirmish>

Rural California Schools Prepare For Possible In-Person Teaching

- While many school districts in the state's more populous areas have been essentially forced to start the school year teaching remotely, more sparsely populated have options.
- Students lined up in front of six tables spaced 20 feet apart across Bishop Union High School's sprawling front lawn. School employees processed their registration packets, braving triple-digit heat on a sunny Tuesday afternoon.
- Kids mingled for the 15 or so minutes they were there. They purchased yearbooks, picked up ID cards and only took off their face masks when it was time to show a photographer their smiles for their annual pictures.
- Occasionally, the voice of Wanda Summers, the principal's secretary, boomed friendly reminders through the intercom. Remember to maintain social distancing unless you come from the same household, she said. Make sure your face masks cover your nose.
- "A little bit of normalcy is what it seemed like," Summers said. "It's our registration day. We do this every year."

Forecast Discussion

High temperatures will remain below seasonal averages today region-wide, with temperatures generally 5 degrees below normal, with some areas seeing highs 10-15 degrees below normal in valley and mountain locations. Winds will increase once again this afternoon and evening across the mountains and deserts, with gusts of 30-45 MPH possible. Smoke will continue in parts of Riverside County and San Bernardino County. A noticeable warming trend will commence through this weekend into next week.
