Sources: CDPH, WHO, CDC, Local County Data

The date for which case statistics and hospital data were reported. Hospital COVID data are self-reported through a portal managed by the California Hospital Association and pulled at 2pm. COVID case statistics are reported by local health departments to CalREDIE and are pulled at 2pm. Hospital data and case statistics are integrated by the California Department of Technology and made available through the Open Data Portal the following morning. CA Open Data Portal is at least 24 Hours behind although a backlog of new case reports at the State level has ostensibly been cleared, some County dashboards still contain notes that indicate data are missing. *California Demographics from State Database Blueprint Data Chart 12-15-20 & census.gov. Presumptive active cases - A calculation (Total Cases - Recovered - Dead) (* LA and Mono County does not report recovery rates) ((TESTING ** Calculation (ICU beds available + Currently in ICU)= Total ICU Beds. *** Calculation (ICU beds available/Total ICU Beds)= % of ICU Available))) Assumption that facilities are not running over 100% capacity.

New Coronavirus Strain In UK Is Likely Already In US, Fauci Says

- The top U.S. infectious disease expert believes the new coronavirus mutation that has quickly spread across the United Kingdom is likely already in the United States. Dr. Anthony Fauci discussed the new strain Monday evening in an interview.
- "When you see something that is pretty prevalent in a place like the U.K. There are also mutations that we're seeing in South Africa and given the travel throughout the world, I would not be surprised if it is already here," Fauci said during the interview.
- "When we start to look for it, we're going to find it."

Hunting for 'Disease X' In the Congo rainforest, the doctor who discovered Ebola warns of deadly viruses yet to come

- **Kinshasa, Democratic Republic of the Congo** — Showing early symptoms of hemorrhagic fever, the patient sits quietly on her bed, wrangling two toddlers desperate to flee the cell-like hospital room in Ingende, a remote town in the Democratic Republic of the Congo (DRC). They are waiting for the results of a test for Ebola.
- But the question at the back of everyone's mind is: What if this woman doesn't have Ebola? What if, instead, she is patient zero of "Disease X," the first known infection of a new pathogen that could sweep the world as fast as Covid-19, but one that has Ebola's 50% to 90% fatality rate?

\$900B Coronavirus Relief Bill Passed By Congress, Sent To Trump

- The 5,593-page legislation — by far the longest bill ever — came together Sunday.
- The relief package, unveiled Monday afternoon, sped through the House and Senate in a matter of hours. The Senate cleared the massive package by a 92-6 vote after the House approved the COVID-19 package by another lopsided vote, 359-53.
- Lawmakers tacked on a \$1.4 trillion catchall spending bill. The bill goes to President Donald Trump for his signature, which is expected in the coming days.

Pregnant women in third trimester unlikely to pass SARS-CoV-2 infection to newborns

- Pregnant women who are infected with SARS-CoV-2, the virus that causes COVID-19, during the third trimester are unlikely to pass the infection to their newborns, suggests a study funded by the National Institutes of Health. The study followed 127 pregnant women who were admitted to Boston hospitals during the spring of 2020. Among the 64 pregnant women who tested positive for SARS-CoV-2, no newborns tested positive for the virus.

Fall 2020 College Enrollment Drops Significantly for 1st-Year Students

- The number of 2020 high school graduates who enrolled in college for Fall 2020 was down by nearly 22%.
- Hundreds of thousands of students have put off going to college this year, according to new data from the [National Student Clearinghouse](#). Undergraduate enrollment decreased 3.6% this year compared to 2019. That's more than 560,200 students who have decided to forego attending an institution of higher education.

CDC: More Kids, Adolescents Got COVID from Social Events Than School

- New findings posted in the Centers for Disease Control and Prevention's (CDC) [Morbidity and Mortality Weekly Report](#) show adolescents and kids aged 18 and under from Mississippi who tested positive for the [coronavirus](#) were far more likely to have contracted it at a social event than at school.
- The research, conducted by a team of doctors, including several at the University of Mississippi Medical Center in Jackson, examined hundreds of pediatric [COVID](#) cases in children living in Mississippi and how "school, community and close contact exposure" have contributed to the virus' spread thus far.
- There were 397 participants in all, including 154 coronavirus-positive children and 243 coronavirus-negative children, according to the report. The children who had contracted COVID tested positive between Sept. 1 and Nov. 5, 2020.

Study: Pandemic Is Accelerating Physical Security Upgrades

- As physical security operations budgets are expected to increase in 2021, driven and accelerated by COVID-19, the study showcases the collective perspectives of chief security officers, chief legal officers, chief compliance officers and physical security decision-makers.
- Business continuity is at the heart of physical security concerns and 69% of security, legal, compliance and physical security executives say their leadership would agree it will be impossible for their company to recover financially and reputation-wise were a fatality to occur as a result of missed physical threats.
- Alarmingly, 71% of respondents say in the past year the lack of unified protective intelligence has resulted in missed threats and physical harm to their company's employees, customers and human assets.

Expect New Healthcare Challenges and Greater Technology Investment in 2021

- The global COVID-19 pandemic has put a strain on resources at hospitals and other healthcare facilities throughout the world, many of which lacked the technology or resources to care for patients. As a result, there has been a rush to embrace new technologies, such as improved patient monitoring devices, access controls and touchless entry that can help keep people safe.
- The most pressing issues such as hospital overcrowding and processes for in-person visits. One issue that has flown largely under the radar is the fact that hospitals are beginning to see a reduction in staff. Despite hospitals are taking every precaution possible, doctors, nurses and other staff members regularly come into close contact with sick individuals as part of their jobs, and many become sick as a result. Most people are not eager to work in hospitals right now, which has made it extremely difficult for healthcare facilities to replace sick or departing staff. What additional difficulties 2021 may bring for hospitals.

COVID-19 VACCINE will be administered through the Riverside University Health System - Public Health in collaboration with state and federal officials. The allocation of the vaccine will be done through a phase and tier system that is subject to change as the pandemic response moves forward.

The first allocation (Phase 1A) will be for those healthcare workers in acute care hospitals with direct patient contact who have potential for direct or indirect exposure. Other critical, vulnerable populations as well as general population will be coming in phases two and three.

PHASE 1A

Critical Healthcare Workers

TIER 1

- Acute Care
- Behavioral Health (psychiatric)
- Correctional hospitals
- Skilled nursing facilities and Assisted living facilities (medically vulnerable individuals)
- First Responders- (paramedic/EMTs)
- Dialysis Centers
- Urgent Cares (stand-alone)
- Pharmacies

TIER 2

- Intermediate care facilities
- Home Health and IHSS
- Public Health /Dept. of Public Social Services
- Community Health Workers
- Community Clinics

TIER 3

- Specialty Clinics
- Laboratory Workers
- Dental Clinics
- Pharmacy Staff (not working in setting at higher tiers)
