Sources: CDPH, WHO, CDC, Local County Data

The date for which case statistics and hospital data were reported. Hospital COVID data are self-reported through a portal managed by the California Hospital Association and pulled at 2pm. COVID case statistics are reported by local health departments to CalREDIE and are pulled at 2pm. Hospital data and case statistics are integrated by the California Department of Technology and made available through the Open Data Portal the following morning. CA Open Data Portal is at least 24 Hours behind although a backlog of new case reports at the State level has ostensibly been cleared, some County dashboards still contain notes that indicate data are missing. *California Demographics from State Database Blueprint Data Chart 12-15-20 & census.gov . Presumptive active cases - A calculation (Total Cases - Recovered - Dead) (* LA and Mono County does not report recovery rates)

New Zealand's new COVID case is the South African variant

- New Zealand's first case of coronavirus in the community in months has been identified as the South African variant, health minister Chris Hipkins said on Monday, adding that the 56-year-old woman probably caught it from another returning traveller just before leaving quarantine

<https://www.aljazeera.com/news/2021/1/25/new-zealands-new-covid-case-is-the-south-african-variant>

Health officials: UK variant running wild, hitting children at a worrying rate

- Virus czar says strain now behind half of cases, may cause serious illness 30% more often; public health head: 40% of cases are in kids; Israel must keep airport shut for weeks
- Ash said officials estimate some 40-50 percent of new daily cases are caused by the British variant.
- Two other variants of the virus, from South Africa and California, have also been detected in Israel.
- The mutations “are setting us back in dealing with the disease,” Ash said, forcing the country into a longer lockdown as well as leading to an approaching closure of Ben Gurion Airport.

<https://www.timesofisrael.com/mutated-covid-19-strains-are-stymieing-efforts-to-curb-spread-virus-czar-says/>

A complete massacre, a horror film': inside Brazil's Covid disaster

- Hospitals in Amazonas state overwhelmed after surge in infections linked to new variant, leaving many without even the most basic supplies. We need to get back to the fight – to carry on saving lives,” Mendes insisted as she digested losing a third of her town's 22 Covid-19 patients in one fell swoop – four of them in their 50s. “But we all feel broken. It was such a hard day.”
- “Private hospitals don't want to take anyone else in because they're afraid of admitting a patient and then running out of oxygen again.”
- Some days [about 200 bodies are being interred](#) in Manaus, compared with the usual 40. Last week many hospitals ran out of the oxygen sustaining Covid patients, apparently because of a catastrophic government failure to foresee the magnitude of the impending disaster.

Merck ends COVID-19 vaccine program, cites inferior immune responses

- Drugmaker Merck & Co on Monday said it will end development of its two COVID-19 vaccines, and will focus pandemic research on treatments, with initial efficacy data on an experimental oral antiviral expected by the end of March.
- Merck was late to join the race to develop a vaccine to protect against the coronavirus, which has so far killed more than 2 million people and continues to surge in many parts of the world including the United States.

<https://www.foxbusiness.com/healthcare/merck-ends-covid-19-vaccine-program-cites-inferior-immune-responses>

Moderna says it's working on Covid booster shot for variant in South Africa, says current vaccine provides some protection

- Moderna said it's accelerating work on a Covid-19 booster shot to guard against the recently discovered variant in South Africa.
- The company's researchers said its current coronavirus vaccine appears to work against the two highly transmissible strains found in the U.K. and South Africa, although it looks like it may be less effective against the latter.

<https://www.cnbc.com/2021/01/25/covid-vaccine-moderna-working-on-covid-booster-shots-for-south-african-strain.html>

DC teachers to receive COVID-19 vaccine before in-person learning restart

- D.C. public school teachers will start to get the coronavirus vaccine Monday, a week before thousands of students return for in-person learning.
- Teachers and support staff at D.C. public schools who are already reporting in-person or who will return to classrooms next week are first in line to receive the vaccine.
- Public school teachers and staff not eligible to participate during this phase will be vaccinated starting Feb. 1.

California health officials lift stay-at-home order for all regions

- California health officials have lifted the regional stay-at-home order for all areas statewide on Monday morning, including the San Joaquin Valley, Southern California and the Bay Area, where ICU capacities still remain under 15%.
- A majority of the counties within the three areas will return to the purple tier in Gov. Gavin Newsom's color-coded tier system, which while less restrictive than the stay-at-home order, still requires non-essential businesses to close and restaurants to serve outdoors only.
- Counties still have the authority to set their own restrictions, and some may decide to keep some of the governor's orders in place as they see necessary.
<https://abc7.com/society/watch-today-california-lifts-regional-stay-at-home-order-statewide/9997141/>

Coronavirus strain homegrown in California, apparently more contagious, may be partly to blame for surge

- California scientists have discovered a homegrown coronavirus strain that appears to be propagating faster than any other variant on the loose in the Golden State.
- Two independent research groups said they stumbled upon the new strain while looking for signs that a highly transmissible variant from the United Kingdom had established itself here. Instead, they found a new branch of the virus' family tree — one whose sudden rise and distinctive mutations have made it a prime suspect in California's vicious holiday surge.
- As they pored over genetic sequencing data in late December and early January, the two teams saw evidence of the new strain's prolific spread leap off their spreadsheets. Though focused on different regions of the state, they uncovered trends that were both remarkably similar and deeply worrying.
- Researchers at Cedars-Sinai Medical Center in Los Angeles found that although the strain had been barely detectable in early October, it accounted for 24% of roughly 4,500 viral samples gathered throughout California in the last weeks of 2020.
<https://ktla.com/news/california/coronavirus-strain-homegrown-in-california-apparently-more-contagious-may-be-partly-to-blame-for-surge/>

Here's how long it will take to vaccinate everyone in California against COVID-19

- It will take nearly the rest of the year to vaccinate half of California's residents against COVID-19 at the current pace of inoculation.
- There are about 40 million Californians. Current vaccines require two doses. From January 14 through January 24, the state used, on average, about 122,000 doses per day.
- At that pace, about 20 million Californians would be fully inoculated against the disease around Thanksgiving. Three-quarters of the state would be inoculated around Memorial Day 2022.
