Sources: CDPH, WHO, CDC, Local County Data

The date for which case statistics and hospital data were reported. Hospital COVID data are self-reported through a portal managed by the California Hospital Association and pulled at 2pm. COVID case statistics are reported by local health departments to CalREDIE and are pulled at 2pm. Hospital data and case statistics are integrated by the California Department of Technology and made available through the Open Data Portal the following morning. CA Open Data Portal is at least 24 Hours behind although a backlog of new case reports at the State level has ostensibly been cleared, some County dashboards still contain notes that indicate data are missing. *California Demographics from State Database Blueprint Data Chart 12-15-20 & census.gov . Presumptive active cases - A calculation (Total Cases - Recovered - Dead) (* LA and Mono County does not report recovery rates)

Canadian mogul fined after getting Covid vaccine meant for Indigenous residents

- Rodney Baker and his wife travelled to remote community of 100 in Yukon territory and claimed to be workers at a local motel
- The former head of a Canadian casino company and his actor wife have been fined after chartering a private plane to a remote community near the Alaska border and receiving coronavirus vaccines meant for vulnerable Indigenous residents.
- “Effectively what they did was they put our community and our isolation team at risk,” Yukon community services minister John Streicker told CBC News. “I’m pretty angry at the whole thing.”
- White River First Nation had been selected to receive vaccines because of its high-risk elderly population, said Chief Angela Demit.
- Until resigning Sunday, Rodney Baker was head of the Great Canadian Gaming Corporation, which runs racetracks and casinos across the country. His total annual compensation in 2019 was C\$10.6m, according to the Yukon News.
- White River chief Demit called the punishment too “lenient” given the “potentially lethal effects to our community”.
- The Bakers were both charged under the territory’s Civil Emergency Measures Act, which carries a maximum fine of C\$500 (\$392) plus a C\$75 surcharge, six months in jail, or both.

Schools across Africa shutdown as Covid cases spike across the continent

- The country had reported no cases for more than two months but now they have spiked and a third of the 353 total deaths have occurred in the past two weeks, according to John Hopkins University data.
- As a second wave of coronavirus spreads through parts of Africa, countries across the continent are shutting down schools to control the spread of the virus.
- Malawi was the latest to close schools when President Lazarus Chakwera announced that they would close for three weeks after a sharp rise in numbers.
- A girls secondary school in the capital Lilongwe had 137 students who tested positive,

NIH launches database to track neurological symptoms associated with COVID-19

- The body’s response to COVID-19 infection on the brain, spinal cord, nerves and muscle can be particularly devastating.
- A new database will collect information from clinicians about COVID-19-related neurological symptoms, complications, and outcomes as well as COVID-19 effects on pre-existing neurological conditions. The COVID-19 Neuro Databank/Biobank (NeuroCOVID), which was created and will be maintained by NYU Langone Health, New York City, will be a resource of clinical information as well as biospecimens from people of all ages who have experienced neurological problems associated with SARS-CoV-2 infection. The database is supported by the National Institutes of Health’s National Institute of Neurological Disorders and Stroke (NINDS).

Johnson & Johnson expects COVID-19 vaccine data next week

- Johnson & Johnson on Tuesday said it expected to report eagerly-awaited data on its COVID-19 vaccine early next week, and that it would be able to meet the delivery target for doses to countries with which it had signed supply agreements.

Everyday activities are more dangerous now that new Covid-19 variants are circulating, expert says

- Health officials are "extremely" worried about the new Covid-19 variants that have been detected in the US and what they could mean over the coming months, one expert said Monday night.
- "We've seen what happens in other countries that have actually had coronavirus under relatively good control, then these variants took over and they had explosive spread of the virus, and then overwhelmed hospitals," emergency physician Dr. Leana
- "Wearing an even better mask, reducing the number of times that we have to go out shopping, or in indoor crowded settings, all of that will be helpful," Wen added.
- Dr. Anthony Fauci told NBC Monday wearing two masks is likely more effective in stopping the spread of the virus.
- "If you have a physical covering with one layer, you put another layer on, it just makes common sense that it likely would be more effective," he said.

Nanoparticle Technology Holds Promise for Protecting Against Many Coronavirus Strains at Once

- It's truly encouraging to witness people all across our nation rolling up their sleeves to get their COVID-19 vaccines. That is our best chance to end this pandemic. But this is the third coronavirus to emerge and cause serious human illness in the last 20 years, and it's probably not the last. So, this is also an opportunity to step up our efforts to develop vaccines to combat future strains of disease-causing coronavirus. With this in mind, I'm heartened by a new NIH-funded study showing the potential of a remarkably adaptable, nanoparticle-based approach to coronavirus vaccine development
