WHO provides one million antigen-detecting rapid diagnostic test kits to accelerate testing in Indonesia

- To support ongoing efforts in expanding testing strategies and capacity in Indonesia, WHO provided one million antigen-detecting rapid diagnostic tests (AgRDTs) to the Ministry of Health on Saturday, 13 March 2021 to be further distributed to community health centers and other points of care across the country. The Government of Japan made the procurement, at an estimated cost of US\$5 million, possible among others.

WHO report: COVID likely 1st jumped into humans from animals

- A joint World Health Organization-China study on the origins of COVID-19 says that transmission of the virus from bats to humans through another animal is the most likely scenario and that a lab leak is “extremely unlikely,” according to a draft copy obtained by The Associated Press.
- The findings offer little new insight into how the virus first emerged and leave many questions unanswered. But the report does provide more detail on the reasoning behind the researchers’ conclusions.
- The team proposed further research in every area except the lab leak hypothesis — a speculative theory that was promoted by former U.S. President Donald Trump among others. It also said the role played by a seafood market where human cases were first identified was uncertain.
- Dr. Anthony Fauci, said he would like to see the report’s raw information first before deciding about its credibility. “I’d also would like to inquire as to the extent in which the people who were on that group had access directly to the data that they would need to make a determination,” he said. “I want to read the report first and then get a feel for what they really had access to -- or did not have access to.”
- Matthew Kavanagh of Georgetown University said he report deepened the understanding of the virus’s origins, but more information was needed. “It is clear that that the Chinese government has not provided all the data needed and, until they do, firmer conclusions will be difficult,” he said in a statement.

Mexico's coronavirus death toll is likely 60% higher than confirmed numbers

- Mexico’s death toll from the coronavirus pandemic is likely at least 60% higher than the confirmed number, putting it in excess of 300,000, according to government data.
- Updated figures [here](#) on excess mortality in a table published by Mexico's Health Ministry showed that by the end of the sixth week of this year, 294,287 fatalities "associated with COVID-19" had been registered on death certificates in Mexico.
- That was 61.4% higher than the confirmed death toll of 182,301 given as a comparison in the same table.

Researchers in Mexico show off nose masks, San Diego doctors wary

- Researchers in Mexico say they have figured out a way to keep people somewhat protected from COVID while eating or drinking, by wearing masks that only cover the nose.

- While they may look funny, the masks are designed to cover the nose area, which is a proven pathway for COVID to enter. But, some experts warn COVID can also be transmitted through the mouth and eyes.
- "The nose mask would provide a false level of reassurance of safety," said Dr. Edward Cachay, a professor in the Division of Infectious Disease and Global Public Health at UC San Diego.

CDC extends eviction ban through June 30

- The Centers for Disease Control said Monday that the federal eviction moratorium has been extended through June 30, a move that will protect millions of tenants who have struggled to make their rent payments during the coronavirus crisis.
- “The COVID-19 pandemic has presented a historic threat to the nation’s public health,” CDC Director Rochelle Walensky said in a statement. “Keeping people in their homes and out of crowded or congregate settings — like homeless shelters — by preventing evictions is a key step in helping to stop the spread of COVID-19.”

Cases in Florida, a National COVID Bellwether, Are Rising

- The state furthest along in lifting restrictions, reopening society and welcoming tourists — as a bellwether for the nation.
- If recent trends there are any indication, the rest of the country may be in trouble.
- The number of confirmed coronavirus cases in Florida has been steadily rising, though hospitalizations and deaths are still down. Over the past week, the state has averaged nearly 5,000 cases per day, an increase of 8% from its average two weeks earlier.

100 new coronavirus cases at day care linked to UK variant outbreak

- At least 100 coronavirus cases have been linked to a day care center in Omaha, Nebraska, including some from the U.K. variant, health officials said.
- The Rosewood Academy Childcare and Preschool was shut down last week following confirmation of the first few cases, according to the Douglas County Health Department.
- "This points out the need to be vigilant about non-pharmaceutical interventions and get child care workers vaccinated," the spokesman said in a statement to ABC News.

Jail visits resume at San Bernardino County jails after year-long suspension during coronavirus pandemic

- Relatives and friends of inmates at San Bernardino County jails regain the ability to see their incarcerated loved ones in person starting Wednesday, March 31, after visitation rights were suspended for over a year because of the coronavirus pandemic.
- Sheriff's officials made an announcement Friday regarding plans to reinstate visitation rights at the county's four detention facilities. That's 12 days after an official assessment regarding the threat of COVID-19 in San Bernardino County was downgraded from purple to the less restrictive red tier.

'We don't want to have to start over': Experts in La Jolla urge public restraint to continue COVID-19 easing

- Restoring San Diego County's long-severed social connections is starting to feel less and less risky now that nearly 80 percent of its residents 65 and older have been vaccinated.
- Under state law, only the governor may declare that the pandemic is no longer a public health emergency and, so far, it has technically remained so. Despite mounting public pressure to pull back on emergency powers, the state has followed a cautious path, allowing a gradual return from hibernation that will reach its broadest point Thursday, April 1, with the return of fans at outdoor entertainment venues and visitors to amusement parks. While many, pointing to much lower COVID-related hospitalizations, are demanding that the state reopen faster still, experts continue to warn that this is not the moment to head to bars sans masks.

Fairplex in Pomona was 'critical' to LA County coronavirus response efforts, officials say

- Long before the coronavirus pandemic became a reality, Fairplex officials in Pomona had a plan in place to help if an emergency struck the local community.
- The Fairplex, partnering with L.A. County to allow use of the Sheraton Fairplex Hotel and its 244 rooms to [quarantine coronavirus patients](#), including those exposed to COVID-19 and others that could not safely quarantine or isolate in place.
- The hotel was the first contracted by L.A. County to assist with its coronavirus response and since March 2020 served more than 3,500 patients.
