Sources: CDPH, WHO, CDC, Local County Data, LA Times

The date for which case statistics and hospital data were reported. Hospital COVID data are self-reported through a portal managed by the California Hospital Association and pulled at 2pm. COVID case statistics are reported by local health departments to CalREDIE and are pulled at 2pm. Hospital data and case statistics are integrated by the California Department of Technology and made available through the Open Data Portal the following morning. CA Open Data Portal is at least 24 Hours behind although a backlog of new case reports at the State level has ostensibly been cleared, some County dashboards still contain notes that indicate data are missing. *California Demographics from State Database Blueprint Data Chart 12-15-20 & census.gov . Presumptive active cases - A calculation (Total Cases - Recovered - Dead) (* LA County does not report recovery rates)

Vietnam detects a suspected new coronavirus variant that's a hybrid of the UK and India strains

- Vietnam's health ministry has detected a suspected new coronavirus variant which it said appears to be a hybrid of two highly transmissible strains.
- "A new coronavirus variant with characteristics from the existing Indian and UK variants had been detected in Vietnam for the first time," Vietnam's Minister of Health Nguyen Thanh Long told a national news conference Saturday.
- The Southeast Asian country was held up as a leading example in containing the virus thanks to an aggressive strategy of early screening of passengers at airports and a strict quarantine and monitoring program.
- But since late April, Vietnam has reported a sharp increase in Covid-19 cases. Almost half its 6,396 confirmed infections were reported in the past month alone, according to Johns Hopkins University data.

Even Vaccinated California Workers May Have to Keep Masks on

- Major California businesses expressed frustration Thursday with proposed rules by state workplace regulators that would only allow workers to go maskless if everyone in a room is fully vaccinated against the coronavirus.
- The workplace rules could remain in place into early next year even though coronavirus cases have fallen dramatically in the state after a severe winter spike and as more people get vaccinated.
- That contrasts with the state's plan to fully reopen in less than two weeks and do away with virtually all mask and social distancing requirements for vaccinated people.
- "Cal/OSHA is out of step with the rest of the country," said Andrew Sommer on behalf of the California Employers COVID-19 Prevention Coalition.
- Gov. Gavin Newsom, who established the state reopening date of June 15, was noncommittal about what he would do if the idea is adopted. Newsom has the power to override it with an executive order.
- "We'll see where they land on the rulemaking before making a determination of next steps," he said, adding that Cal/OSHA must apply its rules to a wide variety of businesses, including places like meatpacking facilities that were hit especially hard by the virus.
- The proposal, which was under consideration at a meeting of the Occupational Safety and Health Standards Board that [began at 10 a.m.](#), reflects the latest possible relaxation of tried-and-true techniques for thwarting coronavirus transmission.
* At the time of this report 4:00 PM the meeting is still in the public comment phase with over 100 public comments, each given 3 minutes.

CDC Recommendations for Isolation, Quarantine and Testing

- The following recommendations apply to non-healthcare settings
- **Fully vaccinated people with COVID-19 symptoms:**
Although the risk that fully vaccinated people could become infected with COVID-19 is low, any fully vaccinated person who experiences symptoms consistent with COVID-19 should isolate themselves from others, be clinically evaluated for COVID-19, and tested for SARS-CoV-2 if indicated. The symptomatic fully vaccinated person should inform their healthcare provider of their vaccination status at the time of presentation to care.
- **Fully vaccinated people with no COVID-like symptoms following an exposure to someone with suspected or confirmed COVID-19:**
Most fully vaccinated people with no COVID-like symptoms do not need to quarantine, be restricted from work, or be tested following an exposure to someone with suspected or confirmed COVID-19, as their risk of infection is low. However, they should still monitor for symptoms of COVID-19 for 14 days following an exposure. Exceptions where testing (but not quarantine) is still recommended following an exposure to someone with suspected or confirmed COVID-19 include:

5 Things We Learned From Anthony Fauci's Emails

- a fresh window into Fauci's life and work has opened, as thousands of pages of Fauci's work emails from the early months of the pandemic have been released to BuzzFeed and The Washington Post via Freedom of Information Act requests.
- BuzzFeed has posted its entire trove [here](https://www.npr.org/2021/06/03/1002865747/5-things-we-learned-from-anthony-faucis-emails) for public perusal. These are some things that we found as we pored through the archive.

COVID-19 Community Profile Report 06-02-2021

<https://beta.healthdata.gov/Health/COVID-19-Community-Profile-Report/gqxm-d9w9>

NUMBER OF NEW CASES AND DEATHS IN THE LAST 7 DAYS

Total Cumulative Cases: 33,113,930

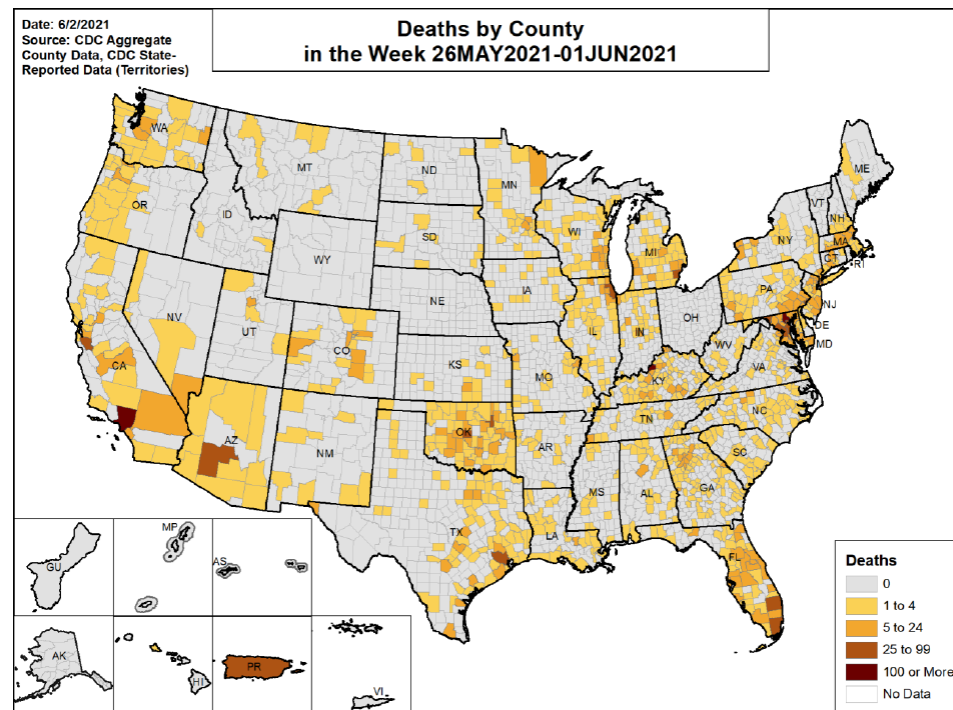

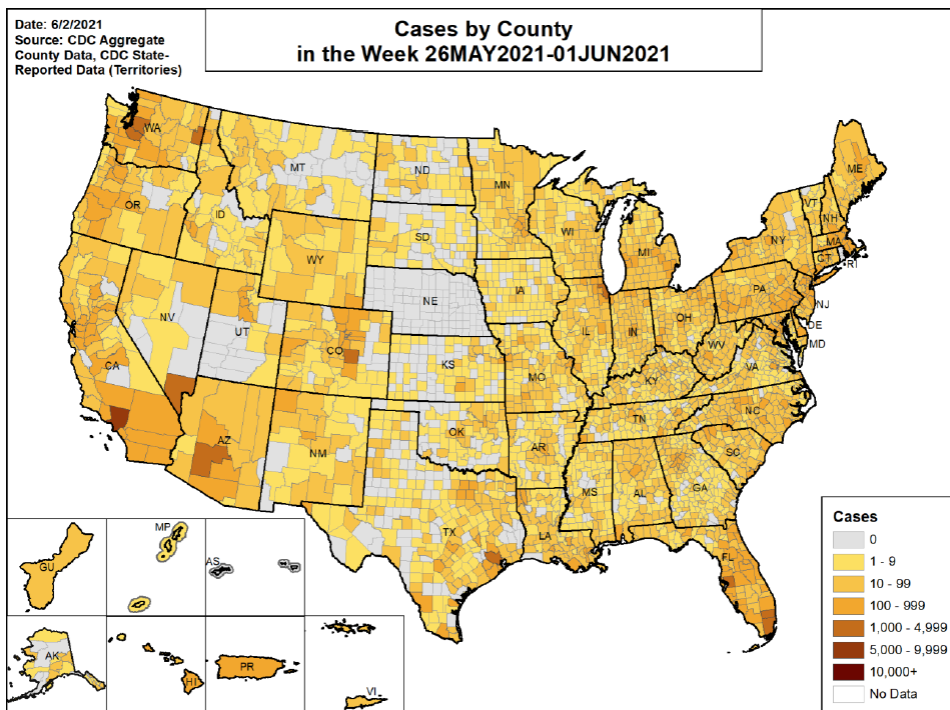

New Cases in Last 7 Days: 109,360

Percent Change from Previous 7 Days: -30.8%

Total Cumulative Deaths: 592,232

New Deaths in Last 7 Days: 2,542

Percent Change from Previous 7 Days: -16.6%

CA state-level mortality data were back distributed on 6/1/2021.
OK state-level case and mortality data were back distributed on 5/26/2021.
SC state-level mortality data were back distributed on 5/26/2021.

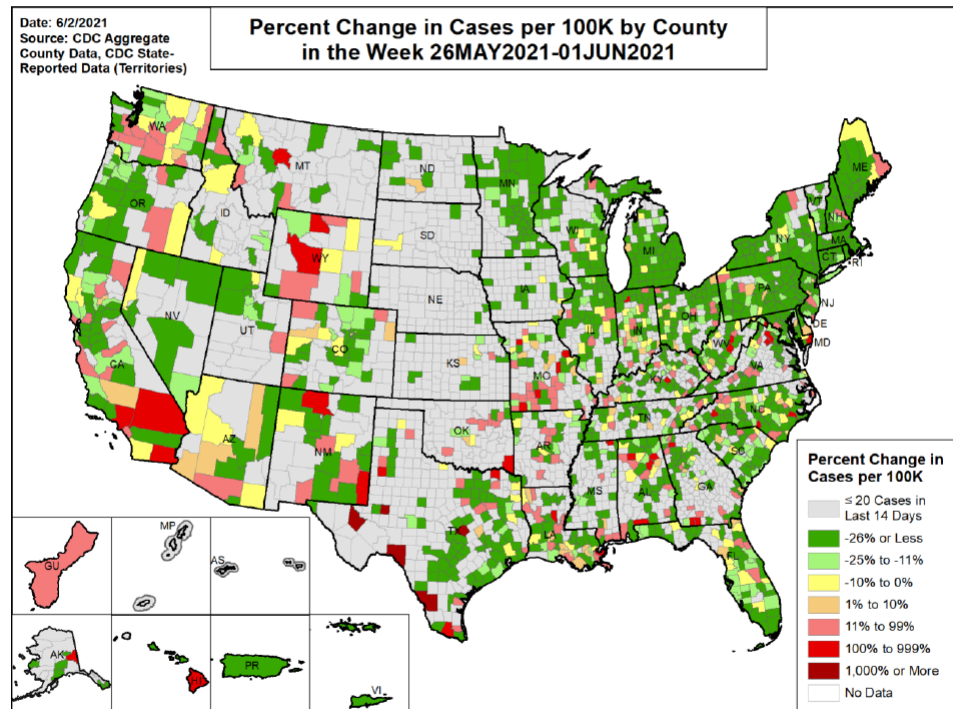

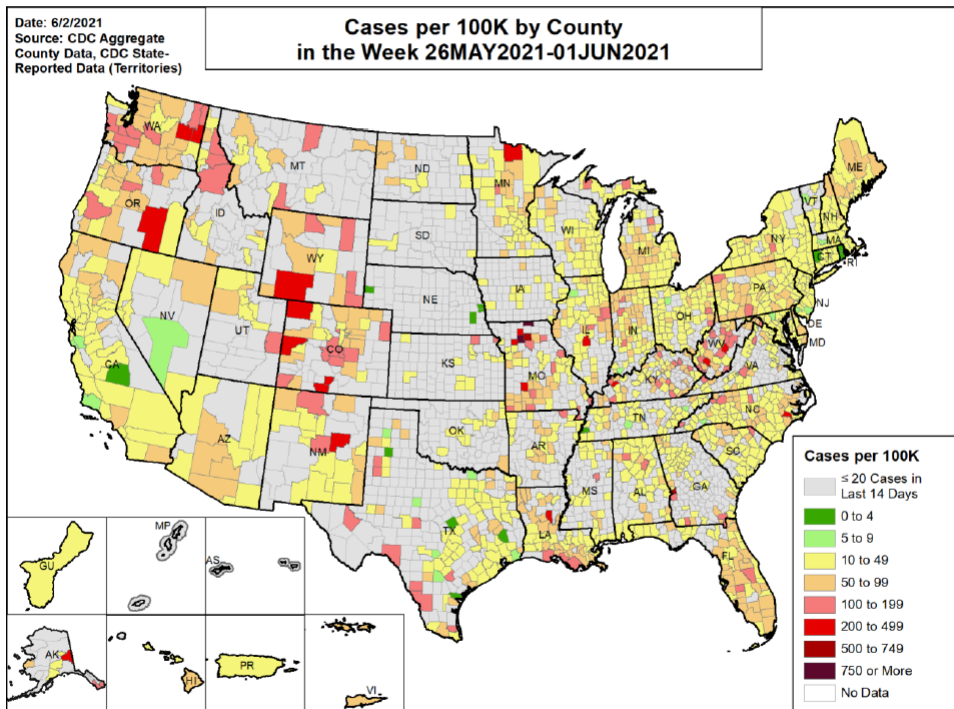

INITIAL PUBLIC RELEASE // SUBJECT TO CHANGE

CASE INCIDENCE IN LAST 7 DAYS AND COMPARISON TO THE PREVIOUS 7 DAYS

Incidence Rate in the Last 7 Days: 32.9 per 100,000

Percent Change from Previous 7 Days: -30.8%

OK state-level case and mortality data were back distributed on 5/26/2021.

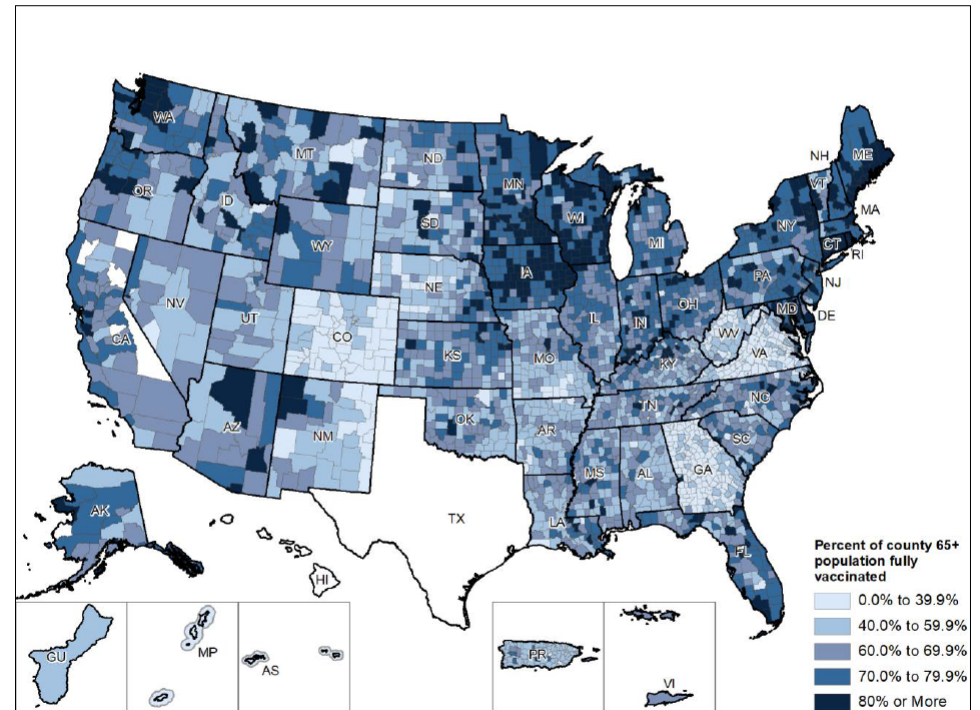

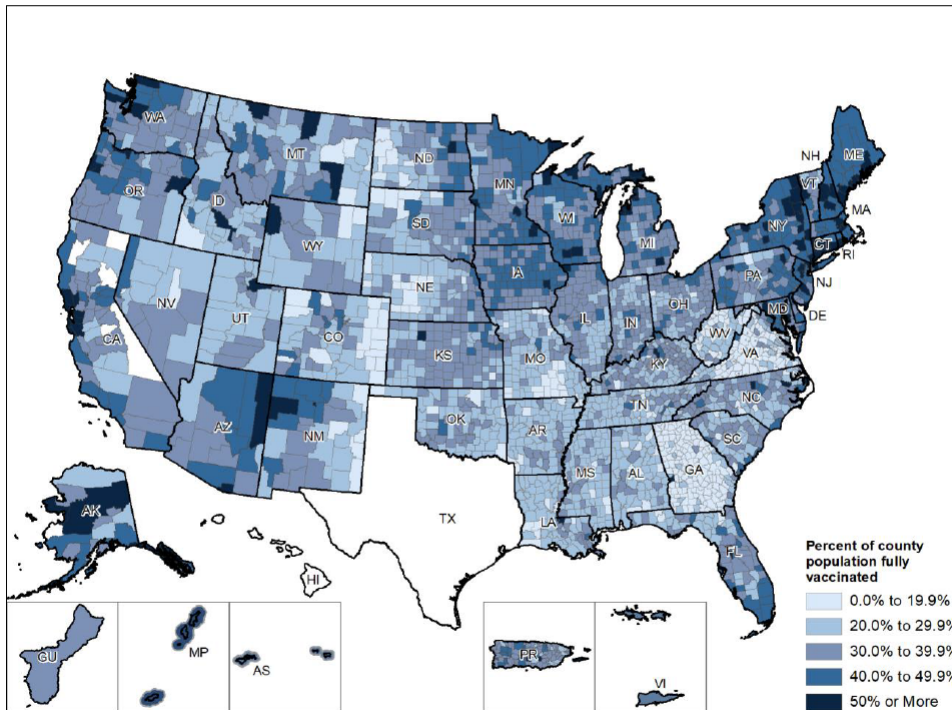

INITIAL PUBLIC RELEASE // SUBJECT TO CHANGE

VACCINATION RATES BY COUNTY

Percent of Population Fully Vaccinated: 41.0%
Percent of Population with at Least 1 Dose: 50.8%

Percent of 65+ Population Fully Vaccinated: 74.7%
Percent of 65+ Population with at Least 1 Dose: 85.7%

Source: Unified COVID-19 Vaccine Dataset. Fully vaccinated indicates those who received the second dose of Pfizer-BioNTech or Moderna vaccines and those who received one dose of J&J/Janssen COVID-19 vaccine. Values reflect total by report date, not administered date. The following states have ≤80% completeness reporting vaccinations by county, which may result in underestimates of vaccination data for counties and CBSAs: VT (74%), CO (73%), WV (54%), VA (51%), GA (50%), HI (0%), AS (0%), TX (0%), PW (0%), FM (0%), MH (0%), MP (0%)

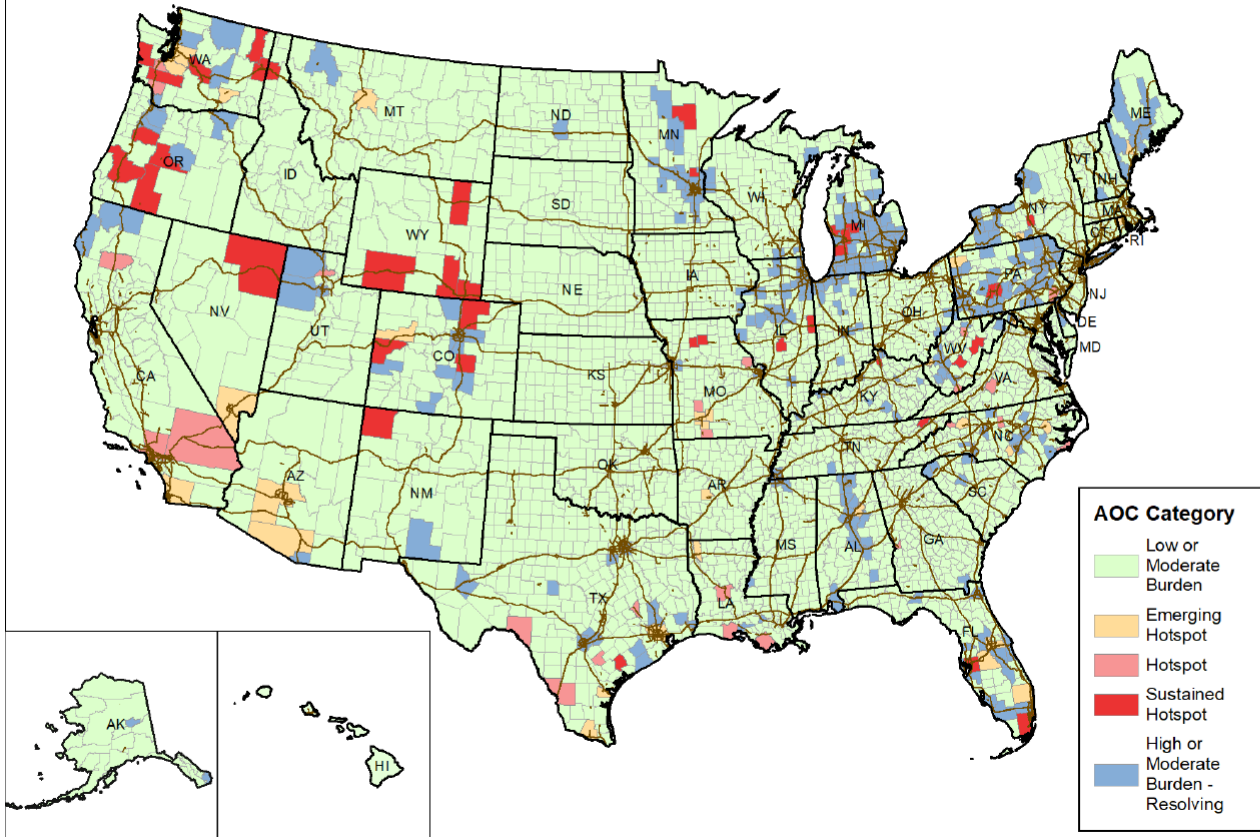

INITIAL PUBLIC RELEASE // SUBJECT TO CHANGE

AREA OF CONCERN CONTINUUM

Date: 6/2/2021

Area of Concern Continuum by County 01JUN2021

The Areas of Concern Continuum (AOCC) is used to describe communities as they progress through stages of the epidemic. There are 7 possible AOC classifications based on current and recent history of case and testing data for the location:

- (1) **Low Burden** – communities with minimal activity
- (2) **Moderate Burden** – communities with moderate disease activity
- (3) **Emerging Hotspot** – communities with a high likelihood to become hotspots in the next 1-7 days
- (4) **Hotspot** – communities that have reached a threshold of disease activity considered as being of high burden
- (5) **Sustained Hotspot** – communities that have had a high sustained case burden and may be higher risk for experiencing healthcare resource limitations
- (6) **High Burden – Resolving** – communities that were recently identified as hotspots and are now improving
- (7) **Moderate Burden – Resolving** – communities that have a moderate level of burden, but are demonstrating improvement

See Data Sources/Methods slides for more information.

Legend

The Air Quality Index (AQI) is an index for reporting daily air quality that conveys how air pollution can affect public health. The AQI is divided into six levels of health concern:

AQI Value

-  Hazardous (301-500)
-  Very Unhealthy (201-300)
-  Unhealthy (151-200)
-  Unhealthy for Sensitive Groups (101-150)
-  Moderate (51-100)
-  Good (0-50)
