Sources: CDPH, WHO, CDC, Local County Data, LA Times

The date for which case statistics and hospital data were reported. Hospital COVID data are self-reported through a portal managed by the California Hospital Association and pulled at 2pm. COVID case statistics are reported by local health departments to CalREDIE and are pulled at 2pm. Hospital data and case statistics are integrated by the California Department of Technology and made available through the Open Data Portal the following morning. CA Open Data Portal is at least 24 Hours behind although a backlog of new case reports at the State level has ostensibly been cleared, some County dashboards still contain notes that indicate data are missing. *California Demographics from State Database Blueprint Data Chart 12-15-20 & census.gov . Presumptive active cases - A calculation (Total Cases - Recovered - Dead) (* LA County does not report recovery rates)

CDC says heart inflammation was higher than expected in 16- to 24-year-olds after second Covid vaccine shot, but still rare

- The number of cases of a heart inflammation condition in 16- to 24-year-olds was higher than expected after they received their second dose of Pfizer's or Moderna's Covid-19 vaccines, the CDC said.
- There have been 275 reported cases of myocarditis or pericarditis, which are inflammation conditions involving the heart, in people ages 16 to 24 as of May 31, according to a CDC presentation.

<https://www.cnn.com/2021/06/10/covid-vaccine-cdc-says-heart-inflammation-cases-in-16-to-24-year-olds-higher-than-expected-after-second-shot.html>

As more kids go down the 'deep, dark tunnel' of long Covid, doctors still can't predict who is at risk

- Kate learned last month from a team of doctors at Boston Children's Hospital that she is suffering from the post-Covid syndrome better known as long Covid. Her Covid-19 test was negative last fall after some teammates and coaches at her gym tested positive, but in February an antibody test ordered by her pediatrician confirmed she had been infected with Covid-19.
- Long Covid is not an adults-only phenomenon. Numbers are hard to come by, but more children and adolescents are experiencing chronic symptoms after Covid even as the pandemic ebbs in the U.S., say doctors at the few clinics devoted to caring for them. Although the disease has played out in ways that differ between adults and children, long Covid is posing the same mystery in kids as in adults.
- No one really knows how common the collection of lingering post-infection symptoms might be in adults; even less is known about its prevalence or course in children and adolescents.
- Experts told STAT they've all looked at one research paper from Rome that studied 129 patients from 2 to 18 years old, as well as data on about 9,000 children and adolescents from the U.K.'s health system. From that small base, they surmise a plausible range from 7% to 20%. In the U.S., nearly 4 million children and adolescents under 18 have tested positive for Covid.

You'll still need a mask at work after California's COVID reopening on June 15. Here's why

- California workers will still need to wear masks and practice social distancing at workplaces for at least a couple of weeks after Gov. Gavin Newsom's June 15 target to fully reopen the state's economy.
- A California state board on Wednesday withdrew proposed updates to its COVID workplace safety rule, meaning the current regulation — which requires masks to be worn at all times indoors, as well as outdoors if less than six feet away from others — will stay in effect for now.
- The standards board of the state's Division of Occupational Safety and Health, commonly called Cal-OSHA, will consider updating its rule again on June 17 to better align with the state and federal guidance. Any update to the rule, if voted on by the board, will go into effect around June 28

INITIAL PUBLIC RELEASE // SUBJECT TO CHANGE

NUMBER OF NEW CASES AND DEATHS IN THE LAST 7 DAYS

Total Cumulative Cases: 33,224,075
New Cases in Last 7 Days: 98,999
Percent Change from Previous 7 Days: -10.3%

Total Cumulative Deaths: 595,625
New Deaths in Last 7 Days: 2,523
Percent Change from Previous 7 Days: +6.5%

WA reclassified deaths from earlier in the pandemic as not related to COVID-19 on 6/8/2021
 FL has a historical correction to state-level mortality data occurring on 6/8/2021.
 ID has a historical correction to state-level mortality data occurring on 6/8/2021.

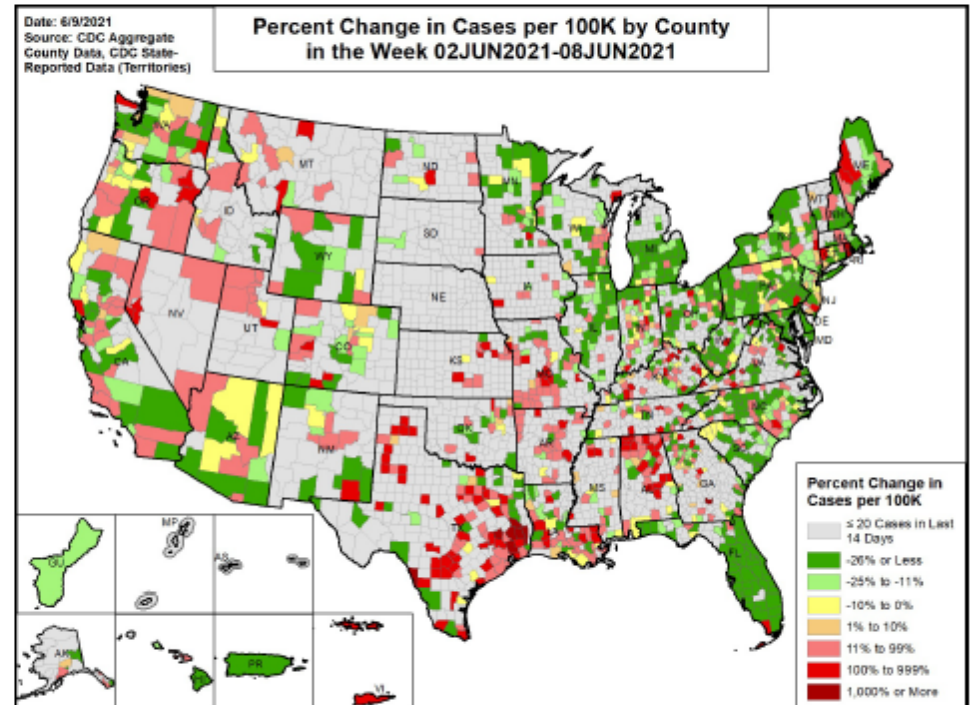

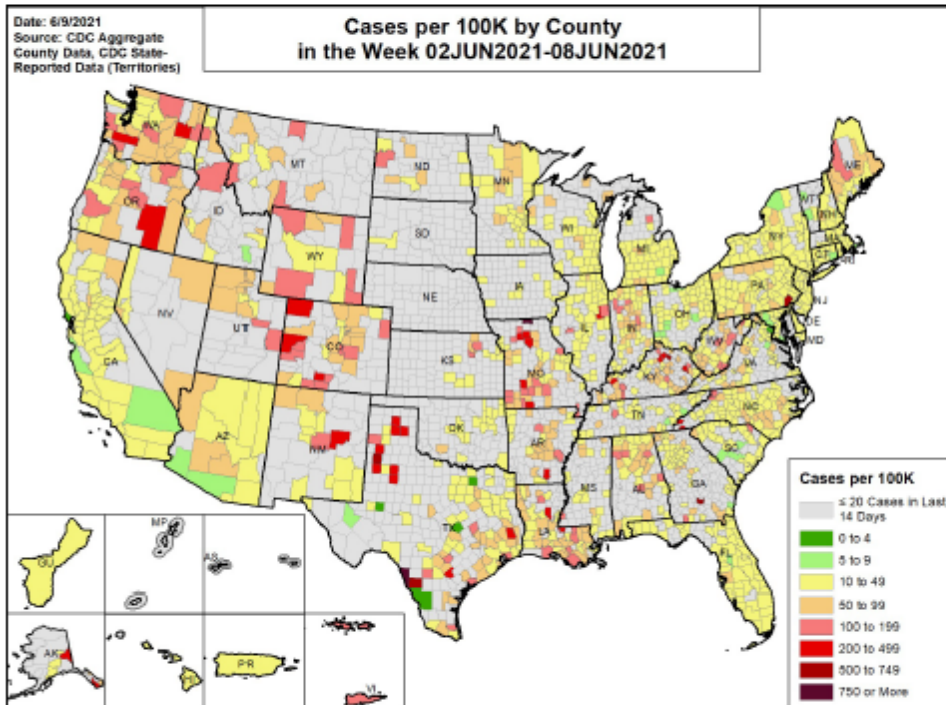

INITIAL PUBLIC RELEASE // SUBJECT TO CHANGE

CASE INCIDENCE IN LAST 7 DAYS AND COMPARISON TO THE PREVIOUS 7 DAYS

Incidence Rate in the Last 7 Days: 29.8 per 100,000

Percent Change from Previous 7 Days: -10.3%

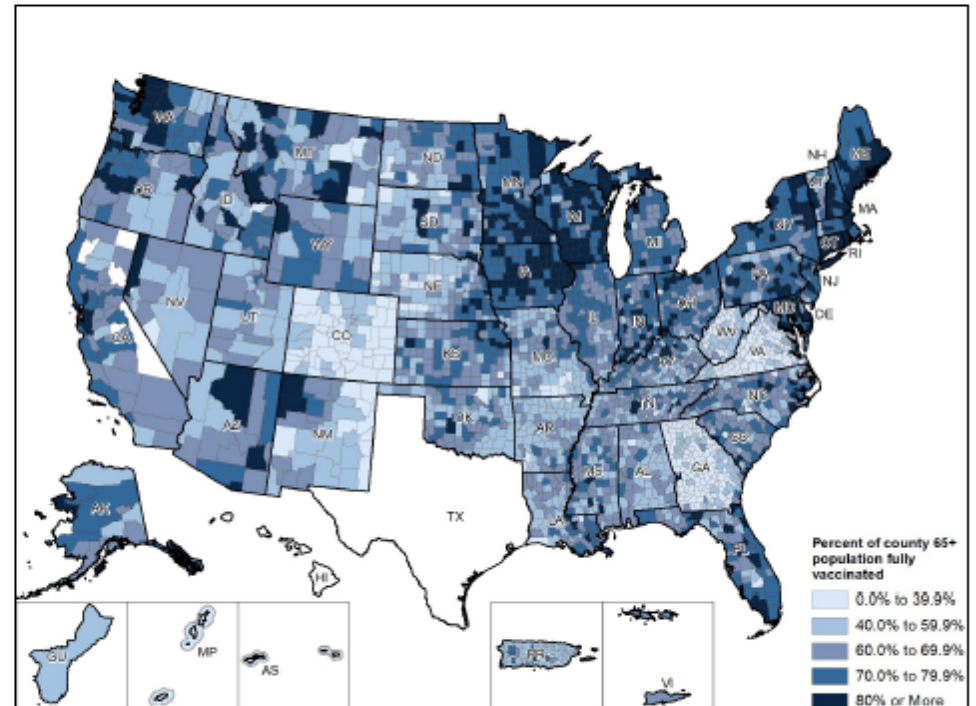

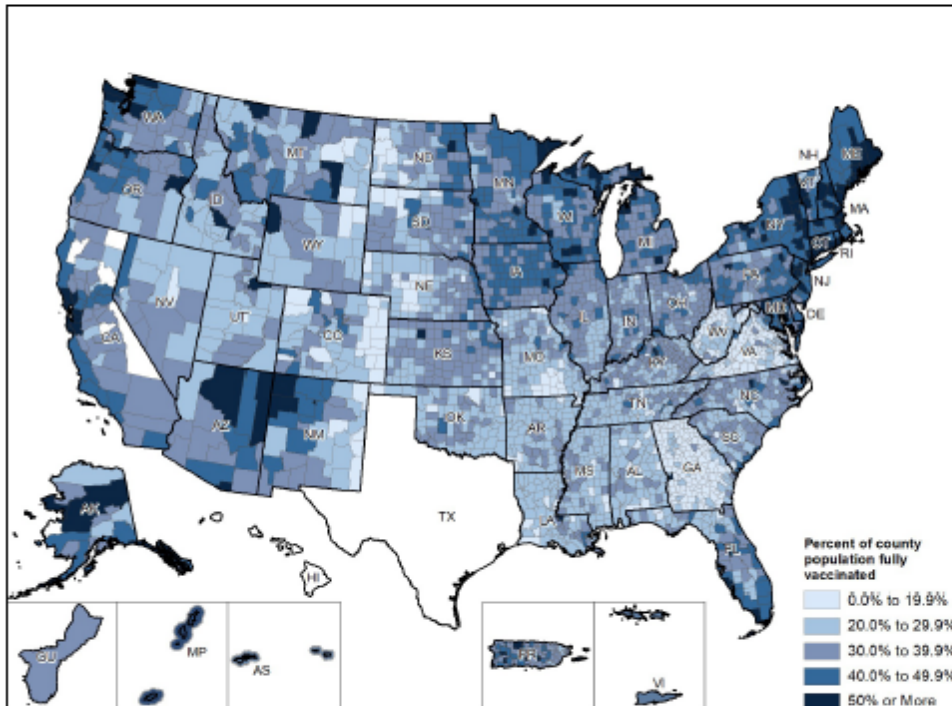

INITIAL PUBLIC RELEASE // SUBJECT TO CHANGE

VACCINATION RATES BY COUNTY

Percent of Population Fully Vaccinated: 42.5%
Percent of Population with at Least 1 Dose: 51.8%

Percent of 65+ Population Fully Vaccinated: 75.5%
Percent of 65+ Population with at Least 1 Dose: 86.2%

Source: Unified COVID-19 Vaccine Dataset. Fully vaccinated indicates those who received the second dose of Pfizer-BioNTech or Moderna vaccines and those who received one dose of J&J/Janssen COVID-19 vaccine. Values reflect total by report date, not administered date. The following states have 80% completeness reporting vaccinations by county, which may result in underestimates of vaccination data for counties and CBSAs: VT (74%), CO (74%), WV (54%), GA (51%), VA (51%), HI (0%), AS (0%), TX (0%), PW (0%), FM (0%), MH (0%), MP (0%)

Legend

The Air Quality Index (AQI) is an index for reporting daily air quality that conveys how air pollution can affect public health. The AQI is divided into six levels of health concern:

- AQI Value
-  Hazardous (301-500)
 -  Very Unhealthy (201-300)
 -  Unhealthy (151-200)
 -  Unhealthy for Sensitive Groups (101-150)
 -  Moderate (51-100)
 -  Good (0-50)
